Janus Remote Communications Announces Verizon Certification for their new CDMA864CF v3.0 Plug-In Terminus

Aurora, IL – Janus Remote Communications, a leader in the M2M (machine to machine) communication products and services, announced today that their CDMA864CF v3.0 Plug-In Terminus achieved Verizon end product certification.

Adding to their highly successful line of cellular modems and terminal products, the Janus Plug-In Terminus modules now allow users to quickly and easily add Verizon cellular connectivity to any existing or new applications. The common footprint design affords users the option to change back and forth between cellular networks as their communication needs change.

The CDMA864CF v3.0 has a 5V power supply, 7 configurable GPIOs, 1 DAC and 1 ADC. USB or Serial UARTs can be used to communicate with the device. With all of these innovative and cost effective features, the CDMA864CF v3.0 is an easy answer for your M2M communication needs.

Janus currently supports three different network communication modules in their common footprint design: GSM/GPRS (2.5G), CDMA (3G), and UMTS (3G). Development is currently under way for an HSPA (4G) footprint compatible solution. Janus is proud to use Telit GSM/GPRS technology in the Terminus Plug-In modules.

CDMA864CF v3.0 Pricing is 1000 pieces at \$96.00 browse our store at www.janus-rc.com
