

# HE910/UE910 AT Commands Reference Guide

80378ST10091A Rev. 5 – 2013-07-01

## APPLICABILITY TABLE<sup>1</sup>

| PRODUCT   |
|-----------|
| HE910     |
| HE910-D   |
| HE910-GA  |
| HE910-EUR |
| HE910-EUD |
| HE910-EUG |
| HE910-NAR |
| HE910-NAD |
| HE910-NAG |
| UE910-EUR |
| UE910-EUD |
| UE910-NAR |
| UE910-NAD |

SW Version

12.00.xx4

Note: the features described by the present document are provided by the products equipped with the software versions equal or greater than the version shown in the table.

<sup>1</sup> HE910 is the “type name” of the products marketed as HE910-G and HE910-DG

*SPECIFICATIONS SUBJECT TO CHANGE WITHOUT NOTICE***Notice**

While reasonable efforts have been made to assure the accuracy of this document, Telit assumes no liability resulting from any inaccuracies or omissions in this document, or from use of the information obtained herein. The information in this document has been carefully checked and is believed to be entirely reliable. However, no responsibility is assumed for inaccuracies or omissions. Telit reserves the right to make changes to any products described herein and reserves the right to revise this document and to make changes from time to time in content hereof with no obligation to notify any person of revisions or changes. Telit does not assume any liability arising out of the application or use of any product, software, or circuit described herein; neither does it convey license under its patent rights or the rights of others.

It is possible that this publication may contain references to, or information about Telit products (machines and programs), programming, or services that are not announced in your country. Such references or information must not be construed to mean that Telit intends to announce such Telit products, programming, or services in your country.

**Copyrights**

This instruction manual and the Telit products described in this instruction manual may be, include or describe copyrighted Telit material, such as computer programs stored in semiconductor memories or other media. Laws in the Italy and other countries preserve for Telit and its licensors certain exclusive rights for copyrighted material, including the exclusive right to copy, reproduce in any form, distribute and make derivative works of the copyrighted material. Accordingly, any copyrighted material of Telit and its licensors contained herein or in the Telit products described in this instruction manual may not be copied, reproduced, distributed, merged or modified in any manner without the express written permission of Telit. Furthermore, the purchase of Telit products shall not be deemed to grant either directly or by implication, estoppel, or otherwise, any license under the copyrights, patents or patent applications of Telit, as arises by operation of law in the sale of a product.

**Computer Software Copyrights**

The Telit and 3rd Party supplied Software (SW) products described in this instruction manual may include copyrighted Telit and other 3rd Party supplied computer programs stored in semiconductor memories or other media. Laws in the Italy and other countries preserve for Telit and other 3rd Party supplied SW certain exclusive rights for copyrighted computer programs, including the exclusive right to copy or reproduce in any form the copyrighted computer program. Accordingly, any copyrighted Telit or other 3rd Party supplied SW computer programs contained in the Telit products described in this instruction manual may not be copied (reverse engineered) or reproduced in any manner without the express written permission of Telit or the 3rd Party SW supplier. Furthermore, the purchase of Telit products shall not be deemed to grant either directly or by implication, estoppel, or otherwise, any license under the copyrights, patents or patent applications of Telit or other 3rd Party supplied SW, except for the normal non-exclusive, royalty free license to use that arises by operation of law in the sale of a product.

## Usage and Disclosure Restrictions

### License Agreements

The software described in this document is the property of Telit and its licensors. It is furnished by express license agreement only and may be used only in accordance with the terms of such an agreement.

### Copyrighted Materials

Software and documentation are copyrighted materials. Making unauthorized copies is prohibited by law. No part of the software or documentation may be reproduced, transmitted, transcribed, stored in a retrieval system, or translated into any language or computer language, in any form or by any means, without prior written permission of Telit

### High Risk Materials

Components, units, or third-party products used in the product described herein are NOT fault-tolerant and are NOT designed, manufactured, or intended for use as on-line control equipment in the following hazardous environments requiring fail-safe controls: the operation of Nuclear Facilities, Aircraft Navigation or Aircraft Communication Systems, Air Traffic Control, Life Support, or Weapons Systems (High Risk Activities"). Telit and its supplier(s) specifically disclaim any expressed or implied warranty of fitness for such High Risk Activities.

### Trademarks

TELIT and the Stylized T Logo are registered in Trademark Office. All other product or service names are the property of their respective owners.

| 5.1.4.3.18. | List Current Calls - +CLCC .....                               | 82  |
| 5.1.4.3.19. | SS Notification - +CSSN .....                                  | 83  |
| 5.1.4.3.20. | Closed User Group - +CCUG .....                                | 84  |
| 5.1.4.3.21. | Preferred Operator List - +CPOL.....                           | 84  |
| 5.1.4.3.22. | Selection of preferred PLMN list - +CPLS .....                 | 85  |
| 5.1.4.4.    | Mobile Equipment Control .....                                 | 86  |
| 5.1.4.4.1.  | Phone Activity Status - +CPAS .....                            | 86  |
| 5.1.4.4.2.  | Set Phone functionality - +CFUN .....                          | 87  |
| 5.1.4.4.3.  | Enter PIN - +CPIN .....                                        | 88  |
| 5.1.4.4.4.  | Signal Quality - +CSQ .....                                    | 90  |
| 5.1.4.4.5.  | Indicator Control - +CIND.....                                 | 91  |
| 5.1.4.4.6.  | Mobile Equipment Event Reporting - +CMER.....                  | 93  |
| 5.1.4.4.7.  | Select Phonebook Memory Storage - +CPBS .....                  | 94  |
| 5.1.4.4.8.  | Read Phonebook Entries - +CPBR.....                            | 95  |
| 5.1.4.4.9.  | Find Phonebook Entries - +CPBF .....                           | 97  |
| 5.1.4.4.10. | Write Phonebook Entry - +CPBW .....                            | 99  |
| 5.1.4.4.11. | Clock Management - +CCLK .....                                 | 101 |
| 5.1.4.4.12. | Alarm Management - +CALA .....                                 | 102 |
| 5.1.4.4.13. | Delete Alarm - +CALD.....                                      | 104 |
| 5.1.4.4.14. | Postpone alarm - +CAPD.....                                    | 104 |
| 5.1.4.4.15. | Setting date format - +CSDF.....                               | 104 |
| 5.1.4.4.16. | Setting time format - +CSTF.....                               | 105 |
| 5.1.4.4.17. | Time Zone reporting - +CTZR.....                               | 106 |
| 5.1.4.4.18. | Automatic Time Zone update - +CTZU .....                       | 106 |
| 5.1.4.4.19. | Restricted SIM Access - +CRSM.....                             | 107 |
| 5.1.4.4.20. | Generic SIM access - +CSIM.....                                | 108 |
| 5.1.4.4.21. | Alert Sound Mode - +CALM.....                                  | 110 |
| 5.1.4.4.22. | Ringer Sound Level - +CRSL .....                               | 110 |
| 5.1.4.4.23. | Loudspeaker Volume Level - +CLVL .....                         | 111 |
| 5.1.4.4.24. | Microphone Mute Control - +CMUT.....                           | 111 |
| 5.1.4.4.25. | Silence command - +CSIL .....                                  | 112 |
| 5.1.4.4.26. | Accumulated Call Meter - +CACM .....                           | 112 |
| 5.1.4.4.27. | Accumulated Call Meter Maximum - +CAMM.....                    | 113 |
| 5.1.4.4.28. | Price per Unit and Currency Table - +CPUC.....                 | 113 |
| 5.1.4.4.29. | Call meter maximum event - +CCWE .....                         | 114 |
| 5.1.4.4.30. | Set voice mail number - +CSVM.....                             | 114 |
| 5.1.4.4.31. | Available AT Commands - +CLAC.....                             | 115 |

|               |                                                                     |     |
|---------------|---------------------------------------------------------------------|-----|
| 5.1.4.5.      | Mobile Equipment Errors .....                                       | 116 |
| 5.1.4.5.1.    | Report Mobile Equipment Error - +CMEE .....                         | 116 |
| 5.1.4.6.      | Voice Control .....                                                 | 117 |
| 5.1.4.6.1.    | DTMF Tones Transmission - +VTS .....                                | 117 |
| 5.1.4.6.2.    | Tone Duration - +VTD .....                                          | 118 |
| 5.1.4.7.      | Commands For GPRS .....                                             | 119 |
| 5.1.4.7.1.    | GPRS Mobile Station Class - +CGCLASS .....                          | 119 |
| 5.1.4.7.2.    | GPRS Attach Or Detach - +CGATT .....                                | 119 |
| 5.1.4.7.3.    | GPRS Event Reporting - +CGEREP .....                                | 120 |
| 5.1.4.7.4.    | GPRS Network Registration Status - +CGREG .....                     | 121 |
| 5.1.4.7.5.    | Define PDP Context - +CGDCONT .....                                 | 122 |
| 5.1.4.7.6.    | Quality Of Service Profile - +CGQMIN .....                          | 124 |
| 5.1.4.7.7.    | Quality Of Service Profile - +CGQREQ .....                          | 125 |
| 5.1.4.7.8.    | 3G Quality Of Service Profile (Requested) - +CGEQREQ .....          | 127 |
| 5.1.4.7.9.    | 3G Quality Of Service Profile (Minimum Acceptable) - +CGEQMIN ..... | 130 |
| 5.1.4.7.10.   | PDP Context activate or deactivate - +CGACT .....                   | 133 |
| 5.1.4.7.11.   | 3G Quality Of Service Profile (Negotiated) - +CGEQNEG .....         | 134 |
| 5.1.4.7.12.   | PDP Context - +CGACT .....                                          | 135 |
| 5.1.4.7.13.   | Show PDP Address - +CGPADDR .....                                   | 136 |
| 5.1.4.7.14.   | Modify PDP context - +CGCMOD .....                                  | 137 |
| 5.1.4.7.15.   | Commands for Battery Charger .....                                  | 138 |
| 5.1.4.7.15.1. | Battery Charge - +CBC .....                                         | 138 |
| 5.1.5.        | 3GPP TS 27.005 AT Commands for SMS and CBS .....                    | 139 |
| 5.1.5.1.      | General Configuration .....                                         | 139 |
| 5.1.5.1.1.    | Select Message Service - +CSMS .....                                | 139 |
| 5.1.5.1.2.    | Preferred Message Storage - +CPMS .....                             | 140 |
| 5.1.5.1.3.    | Message Format - +CMGF .....                                        | 141 |
| 5.1.5.1.4.    | Battery and charger status - #CBC .....                             | 141 |
| 5.1.5.2.      | Message Configuration .....                                         | 142 |
| 5.1.5.2.1.    | Service Center Address - +CSCA .....                                | 142 |
| 5.1.5.2.2.    | Set Text Mode Parameters - +CSMP .....                              | 143 |
| 5.1.5.2.3.    | Show Text Mode Parameters - +CSDH .....                             | 145 |
| 5.1.5.2.4.    | Select Cell Broadcast - +CSCB .....                                 | 146 |
| 5.1.5.2.5.    | Save Settings - +CSAS .....                                         | 147 |
| 5.1.5.2.6.    | Restore Settings - +CRES .....                                      | 147 |
| 5.1.5.2.7.    | More message to send - +CMMS .....                                  | 148 |
| 5.1.5.3.      | Message Receiving And Reading .....                                 | 149 |
| 5.1.5.3.1.    | New Message Indications - +CNMI .....                               | 149 |
| 5.1.5.3.2.    | New message acknowledgement - +CNMA .....                           | 154 |
| 5.1.5.3.3.    | List Messages - +CMGL .....                                         | 156 |
| 5.1.5.3.4.    | Read Message - +CMGR .....                                          | 158 |
| 5.1.5.4.      | Message Sending And Writing .....                                   | 161 |
| 5.1.5.4.1.    | Send Message - +CMGS .....                                          | 161 |
| 5.1.5.4.2.    | Send Message From Storage - +CMSS .....                             | 163 |
| 5.1.5.4.3.    | Write Message To Memory - +CMGW .....                               | 164 |
| 5.1.5.4.4.    | Delete Message - +CMGD .....                                        | 166 |
| 5.1.5.4.5.    | Select service for MO SMS messages - +CGSMS .....                   | 167 |
| 5.1.6.        | Custom AT Commands .....                                            | 168 |
| 5.1.6.1.      | General Configuration AT Commands .....                             | 168 |
| 5.1.6.1.1.    | Set AT Interface and trace interface - #PORTCFG .....               | 168 |
| 5.1.6.1.2.    | Network Selection Menu Availability - +PACSP .....                  | 169 |
| 5.1.6.1.3.    | Manufacturer Identification - #CGMI .....                           | 169 |
| 5.1.6.1.4.    | Model Identification - #CGMM .....                                  | 169 |
| 5.1.6.1.5.    | Revision Identification - #CGMR .....                               | 169 |
| 5.1.6.1.6.    | Product Serial Number Identification - #CGSN .....                  | 169 |
| 5.1.6.1.7.    | International Mobile Subscriber Identity (IMSI) - #CIMI .....       | 170 |
| 5.1.6.1.8.    | Read ICCID (Integrated Circuit Card Identification) - #CCID .....   | 170 |
| 5.1.6.1.9.    | Service Provider Name - #SPN .....                                  | 170 |

## HE910/UE910 AT Commands Reference Guide

80378ST10091A Rev. 5 – 2013-07-01

|             |                                                                 |     |
|-------------|-----------------------------------------------------------------|-----|
| 5.1.6.1.10. | Extended Numeric Error report - #CEER.....                      | 170 |
| 5.1.6.1.11. | Extended error report for Network Reject cause - #CEERNET ..... | 173 |
| 5.1.6.1.12. | Display PIN Counter - #PCT .....                                | 174 |
| 5.1.6.1.13. | Software Shut Down - #SHDN .....                                | 175 |
| 5.1.6.1.14. | Extended Reset - #Z .....                                       | 175 |
| 5.1.6.1.15. | Periodic Reset - #ENHRST .....                                  | 175 |
| 5.1.6.1.16. | Wake From Alarm Mode - #WAKE .....                              | 176 |
| 5.1.6.1.17. | Temperature Monitor - #TEMPMON .....                            | 177 |
| 5.1.6.1.18. | General Purpose Input/Output Pin Control - #GPIO .....          | 179 |
| 5.1.6.1.19. | Alarm Pin - #ALARMPIN .....                                     | 181 |
| 5.1.6.1.20. | STAT_LED GPIO Setting - #SLED .....                             | 182 |
| 5.1.6.1.21. | Save STAT_LED GPIO Setting - #SLEDSAV .....                     | 183 |
| 5.1.6.1.22. | SMS Ring Indicator - #E2SMSRI .....                             | 183 |
| 5.1.6.1.23. | Read Analog/Digital Converter input - #ADC .....                | 184 |
| 5.1.6.1.24. | V24 Output Pins Configuration - #V24CFG .....                   | 184 |
| 5.1.6.1.25. | V24 Output Pins Control - #V24 .....                            | 185 |
| 5.1.6.1.26. | GPRS Auto-Attach Property - #AUTOATT .....                      | 186 |
| 5.1.6.1.27. | Multislot Class Control - #MSCLASS .....                        | 186 |
| 5.1.6.1.28. | Cell Monitor - #MONI .....                                      | 187 |
| 5.1.6.1.29. | Serving Cell Information - #SERVINFORM .....                    | 191 |
| 5.1.6.1.30. | Read current network status - #RFSTS .....                      | 193 |
| 5.1.6.1.31. | Query SIM Status - #QSS .....                                   | 197 |
| 5.1.6.1.32. | Delete all phonebook entries - #CPBD .....                      | 198 |
| 5.1.6.1.33. | ATD Dialing Mode - #DIALMODE .....                              | 198 |
| 5.1.6.1.34. | Automatic call - #ACAL .....                                    | 199 |
| 5.1.6.1.35. | Extended automatic call - #ACALEXT .....                        | 200 |
| 5.1.6.1.36. | Extended Call Monitoring - #ECAM .....                          | 201 |
| 5.1.6.1.37. | SMS Overflow - #SMOV .....                                      | 202 |
| 5.1.6.1.38. | Mailbox Numbers - #MBN .....                                    | 202 |
| 5.1.6.1.39. | Message Waiting Indication - #MWI .....                         | 203 |
| 5.1.6.1.40. | Network Emergency Number Update .....                           | 204 |
| 5.1.6.1.41. | Packet Service Network Type - #PSNT .....                       | 205 |
| 5.1.6.1.42. | SIM Presence status - #SIMPR .....                              | 206 |
| 5.1.6.1.43. | Call Forwarding Flags - #CFF .....                              | 207 |
| 5.1.6.1.44. | GSM and UMTS Audio Codec - #CODEC .....                         | 208 |
| 5.1.6.1.45. | Network Timezone - #NITZ .....                                  | 209 |
| 5.1.6.1.46. | Clock management - #CCLK .....                                  | 210 |
| 5.1.6.1.47. | Clock Mode - #CCLKMODE .....                                    | 211 |
| 5.1.6.1.48. | Enhanced Network Selection - #ENS .....                         | 212 |
| 5.1.6.1.49. | Select Band - #BND .....                                        | 213 |
| 5.1.6.1.50. | Automatic Band Selection - #AUTOBND .....                       | 214 |
| 5.1.6.1.51. | PPP-GPRS Connection Authentication Type - #GAUTH .....          | 215 |
| 5.1.6.1.52. | Skip Escape Sequence - #SKIPESC .....                           | 215 |
| 5.1.6.1.53. | Subscriber number - #SNUM .....                                 | 216 |
| 5.1.6.1.54. | SIM detection mode - #SIMDET .....                              | 216 |
| 5.1.6.1.55. | GSM Context Definition - #GSMCONT .....                         | 217 |
| 5.1.6.1.56. | Show Address - #CGPADDR .....                                   | 218 |
| 5.1.6.1.57. | Call Establishment Lock - #CESTHLCK .....                       | 219 |
| 5.1.6.1.58. | Write to I2C - #I2CWR .....                                     | 219 |
| 5.1.6.1.59. | Read to I2C - #I2CRD .....                                      | 220 |
| 5.1.6.1.60. | Power Saving Mode Ring - #PSMRI .....                           | 222 |
| 5.1.6.1.61. | Control Command Flow - #CFLO .....                              | 223 |
| 5.1.6.1.62. | Report concatenated SMS indexes - #CMGLCONCINDEX .....          | 223 |
| 5.1.6.1.63. | Codec Information - #CODECINFO .....                            | 224 |
| 5.1.6.1.64. | Select language - #LANG .....                                   | 226 |
| 5.1.6.1.65. | Enable RX Diversity and set DARP - #RXDIV .....                 | 227 |
| 5.1.6.1.66. | Set Encryption algorithm - #ENCALG .....                        | 228 |
| 5.1.6.1.67. | Escape Sequence Guard Time - #E2ESC .....                       | 230 |

## HE910/UE910 AT Commands Reference Guide

80378ST10091A Rev. 5 – 2013-07-01

|               |                                                                       |     |
|---------------|-----------------------------------------------------------------------|-----|
| 5.1.6.1.68.   | No Carrier Indication Handling - #NCIH.....                           | 231 |
| 5.1.6.1.69.   | Digital/Analog Converter Control - #DAC .....                         | 231 |
| 5.1.6.1.70.   | GSM Antenna Detection - #GSMAD.....                                   | 232 |
| 5.1.6.2.      | AT Run Commands .....                                                 | 234 |
| 5.1.6.2.1.    | Enable SMS Run AT Service - #SMSATRUN .....                           | 234 |
| 5.1.6.2.2.    | Set SMS Run AT Service parameters - #SMSATRUNCFG .....                | 235 |
| 5.1.6.2.3.    | SMS AT Run White List - #SMSATWL .....                                | 236 |
| 5.1.6.2.4.    | Set TCP Run AT Service parameter - #TCPATRUNCFG .....                 | 237 |
| 5.1.6.2.5.    | TCP Run AT Service in listen (server) mode - #TCPATRUNL .....         | 239 |
| 5.1.6.2.6.    | TCP AT Run Firewall List - #TCPATRUNFRWL .....                        | 240 |
| 5.1.6.2.7.    | TCP AT Run Authentication Parameters List - #TCPATRUNAATH .....       | 241 |
| 5.1.6.2.8.    | TCP AT Run in dial (client) mode - #TCPATRUND .....                   | 242 |
| 5.1.6.2.9.    | Closing TCP Run AT Socket - #TCPATRUNCLOSE .....                      | 243 |
| 5.1.6.2.10.   | TCP AT Run Command Sequence - #TCPATCMDSEQ .....                      | 243 |
| 5.1.6.2.11.   | TCP Run AT service to a serial port - #TCPATCONSER .....              | 243 |
| 5.1.6.2.12.   | Run AT command execution - #ATRUNDELAY .....                          | 245 |
| 5.1.6.3.      | Event Monitor Commands.....                                           | 246 |
| 5.1.6.3.1.    | Enable EvMoni Service - #ENAEVMONI .....                              | 246 |
| 5.1.6.3.2.    | EvMoni Service parameter - #ENAEVMONICFG .....                        | 247 |
| 5.1.6.3.3.    | Event Monitoring - #EVMONI .....                                      | 248 |
| 5.1.6.3.4.    | Send Message - #CMGS .....                                            | 251 |
| 5.1.6.3.5.    | Write Message To Memory - #CMGW .....                                 | 253 |
| 5.1.6.3.6.    | AT Command Delay - #ATDELAY .....                                     | 254 |
| 5.1.6.4.      | Multisocket AT Commands.....                                          | 255 |
| 5.1.6.4.1.    | Socket Status - #SS .....                                             | 255 |
| 5.1.6.4.2.    | Socket Info - #SI .....                                               | 257 |
| 5.1.6.4.3.    | Socket Type - #ST .....                                               | 258 |
| 5.1.6.4.4.    | Context Activation - #SGACT .....                                     | 259 |
| 5.1.6.4.5.    | Socket Shutdown - #SH .....                                           | 260 |
| 5.1.6.4.6.    | Socket Configuration - #SCFG .....                                    | 260 |
| 5.1.6.4.7.    | Socket Configuration Extended - #SCFGEXT .....                        | 262 |
| 5.1.6.4.8.    | Socket configuration Extended 2 - #SCFGEXT2 .....                     | 264 |
| 5.1.6.4.9.    | Socket configuration Extended 3 - #SCFGEXT3 .....                     | 267 |
| 5.1.6.4.10.   | Socket Dial - #SD .....                                               | 268 |
| 5.1.6.4.11.   | Socket Restore - #SO .....                                            | 269 |
| 5.1.6.4.12.   | Socket Listen - #SL .....                                             | 270 |
| 5.1.6.4.13.   | Socket Listen UDP - #SLUDP .....                                      | 271 |
| 5.1.6.4.14.   | Socket Accept - #SA .....                                             | 272 |
| 5.1.6.4.15.   | Detect the cause of a Socket disconnection - #SLASTCLOSURE .....      | 272 |
| 5.1.6.4.16.   | Receive Data In Command Mode - #SRECV .....                           | 274 |
| 5.1.6.4.17.   | Send Data In Command Mode - #SEND .....                               | 275 |
| 5.1.6.4.18.   | Send UDP data to a specific remote host - #SENDUDP .....              | 276 |
| 5.1.6.4.19.   | Send UDP data to a specific remote host extended .....                | 278 |
| 5.1.6.4.20.   | Send data in Command Mode extended - #SENDEXT .....                   | 279 |
| 5.1.6.4.21.   | IP Easy Authentication Type - #SGACTAUTH .....                        | 280 |
| 5.1.6.4.22.   | Context activation and configuration - #SGACTCFG .....                | 280 |
| 5.1.6.4.23.   | Context activation and configuration extended - #SGACTCFGEXT .....    | 282 |
| 5.1.6.4.24.   | PAD command features - #PADCMD .....                                  | 283 |
| 5.1.6.4.25.   | PAD forward character - #PADFWD .....                                 | 283 |
| 5.1.6.4.26.   | Base64 encoding/decoding of socket sent/received data - #BASE64 ..... | 284 |
| 5.1.6.4.27.   | SSL Commands.....                                                     | 287 |
| 5.1.6.4.27.1. | Open a socket SSL to a remote server - #SSLD .....                    | 287 |
| 5.1.6.4.27.2. | Enable a SSL socket - #SSLEN .....                                    | 288 |
| 5.1.6.4.27.3. | Close a SSL socket - #SSLH .....                                      | 290 |
| 5.1.6.4.27.4. | Restore a SSL socket after a +++ - #SSLO .....                        | 290 |
| 5.1.6.4.27.5. | Read Data from a SSL socket - #SSLRECV .....                          | 291 |
| 5.1.6.4.27.6. | Report the status of a SSL socket - #SSLS .....                       | 292 |
| 5.1.6.4.27.7. | Manage the security data - #SSLSECDATA .....                          | 293 |

## HE910/UE910 AT Commands Reference Guide

80378ST10091A Rev. 5 – 2013-07-01

|                |                                                                  |     |
|----------------|------------------------------------------------------------------|-----|
| 5.1.6.4.27.8.  | Send data through a SSL socket - #SSLSSEND .....                 | 295 |
| 5.1.6.4.27.9.  | Configure security parameters of a SSL socket - #SSLSECCFG ..... | 296 |
| 5.1.6.4.27.10. | Configure general parameters of a SSL socket - #SSLCFG .....     | 297 |
| 5.1.6.5.       | FTP AT Commands .....                                            | 298 |
| 5.1.6.5.1.     | FTP Time-Out - #FTPTO .....                                      | 298 |
| 5.1.6.5.2.     | FTP Open - #FTPOPEN .....                                        | 298 |
| 5.1.6.5.3.     | FTP Close - #FTPCLOSE .....                                      | 298 |
| 5.1.6.5.4.     | FTP Config - #FTPCFG .....                                       | 298 |
| 5.1.6.5.5.     | FTP Put - #FTPPUT .....                                          | 299 |
| 5.1.6.5.6.     | FTP Get - #FTPGET .....                                          | 301 |
| 5.1.6.5.7.     | FTP GET in command mode - #FTPGETPKT .....                       | 301 |
| 5.1.6.5.8.     | FTP Type - #FTPTYPE .....                                        | 302 |
| 5.1.6.5.9.     | FTP Read Message - #FTPMSG .....                                 | 302 |
| 5.1.6.5.10.    | FTP Delete - #FTPDELE .....                                      | 303 |
| 5.1.6.5.11.    | FTP Print Working Directory - #FTPPWD .....                      | 303 |
| 5.1.6.5.12.    | FTP Change Working Directory - #FTPCWD .....                     | 303 |
| 5.1.6.5.13.    | FTP List - #FTPLIST .....                                        | 304 |
| 5.1.6.5.14.    | Get file size - #FTPFSIZE .....                                  | 304 |
| 5.1.6.5.15.    | FTP Append - #FTPAPP .....                                       | 304 |
| 5.1.6.5.16.    | Set restart position - #FTPREST .....                            | 305 |
| 5.1.6.5.17.    | Receive Data In Command Mode - #FTPRECV .....                    | 306 |
| 5.1.6.5.17.1.  | FTP Append .....                                                 | 308 |
| 5.1.6.5.17.2.  | FTPAPPEXT - #FTPAPPEXT .....                                     | 309 |
| 5.1.6.6.       | Enhanced IP Easy Extension AT Commands .....                     | 311 |
| 5.1.6.6.1.     | Authentication User ID - #USERID .....                           | 311 |
| 5.1.6.6.2.     | Authentication Password - #PASSW .....                           | 311 |
| 5.1.6.6.3.     | Packet Size - #PKTSZ .....                                       | 312 |
| 5.1.6.6.4.     | Data Sending Time-Out - #DSTO .....                              | 312 |
| 5.1.6.6.5.     | Socket Inactivity Time-Out - #SKTTO .....                        | 313 |
| 5.1.6.6.6.     | Socket Definition - #SKTSET .....                                | 313 |
| 5.1.6.6.7.     | Query DNS - #QDNS .....                                          | 315 |
| 5.1.6.6.8.     | DNS Response Caching - #CACHEDNS .....                           | 316 |
| 5.1.6.6.9.     | Manual DNS Selection - #DNS .....                                | 317 |
| 5.1.6.6.10.    | Socket TCP Connection Time-Out - #SKTCT .....                    | 318 |
| 5.1.6.6.11.    | Socket Parameters Save - #SKTSAV .....                           | 318 |
| 5.1.6.6.12.    | Socket Parameters Reset - #SKTRST .....                          | 319 |
| 5.1.6.6.13.    | GPRS Context Activation - #GPRS .....                            | 319 |
| 5.1.6.6.14.    | Socket Dial - #SKTD .....                                        | 321 |
| 5.1.6.6.15.    | Socket Listen - #SKTL .....                                      | 322 |
| 5.1.6.6.16.    | Socket Listen Ring Indicator - #E2SLRI .....                     | 324 |
| 5.1.6.6.17.    | Firewall Setup - #FRWL .....                                     | 324 |
| 5.1.6.6.18.    | GPRS Data Volume - #GDATAVOL .....                               | 326 |
| 5.1.6.6.19.    | ICMP Ping Support - #ICMP .....                                  | 327 |
| 5.1.6.6.20.    | PING request - #PING .....                                       | 328 |
| 5.1.6.6.21.    | DNS from Network - #NWDNS .....                                  | 329 |
| 5.1.6.7.       | SMS AT Commands .....                                            | 330 |
| 5.1.6.7.1.     | Move Short Message to other memory - #SMSMOVE .....              | 330 |
| 5.1.6.7.2.     | SMS Commnads Operation Mode - #SMSMODE .....                     | 331 |
| 5.1.6.8.       | E-mail Management AT Commands .....                              | 332 |
| 5.1.6.8.1.     | E-mail SMTP Server - #ESMTP .....                                | 332 |
| 5.1.6.8.2.     | E-mail Sender Address - #EADDR .....                             | 332 |
| 5.1.6.8.3.     | E-mail Authentication User Name - #EUSER .....                   | 333 |
| 5.1.6.8.4.     | E-mail Authentication Password - #EPASSW .....                   | 333 |
| 5.1.6.8.5.     | E-mail Sending - #EMAILD .....                                   | 334 |
| 5.1.6.8.6.     | E-mail Parameters Save - #ESAV .....                             | 335 |
| 5.1.6.8.7.     | E-mail Parameters Reset - #ERST .....                            | 335 |
| 5.1.6.8.8.     | SMTP Read Message - #EMAILMSG .....                              | 335 |
| 5.1.6.8.9.     | Send mail with attachment - #SMTPCL .....                        | 335 |

|                |                                                                |     |
|----------------|----------------------------------------------------------------|-----|
| 5.1.6.9.       | HTTP Client AT Commands .....                                  | 338 |
| 5.1.6.9.1.     | Configure HTTP Parameters - #HTTPCFG .....                     | 338 |
| 5.1.6.9.2.     | Send HTTP GET, HEAD or DELETE request - #HTTPQRY .....         | 340 |
| 5.1.6.9.3.     | Send HTTP POST or PUT request - #HTTPSND .....                 | 341 |
| 5.1.6.9.4.     | receive HTTP server data - #HTTPCRV .....                      | 343 |
| 5.1.6.10.      | Easy Script® Extension - Python Interpreter, AT Commands ..... | 344 |
| 5.1.6.10.1.    | Write Script - #WSCRIPT .....                                  | 344 |
| 5.1.6.10.2.    | Select Active Script - #ESCRIP .....                           | 345 |
| 5.1.6.10.3.    | Script Execution Start Mode - #STARTMODESCR .....              | 346 |
| 5.1.6.10.4.    | Execute Active Script - #EXECSCR .....                         | 347 |
| 5.1.6.10.5.    | Read Script - #RSCRIPT .....                                   | 347 |
| 5.1.6.10.6.    | List Script Names - #LSCRIPT .....                             | 348 |
| 5.1.6.10.7.    | Delete Script - #DSCRIPT .....                                 | 350 |
| 5.1.6.10.8.    | Reboot - #REBOOT .....                                         | 350 |
| 5.1.6.11.      | SIM Toolkit Commands .....                                     | 351 |
| 5.1.6.11.1.    | SIM Toolkit Interface Activation - #STIA .....                 | 351 |
| 5.1.6.11.2.    | SIM Toolkit Get Information - #STGI .....                      | 357 |
| 5.1.6.11.3.    | SIM Toolkit Send Response - #STSR .....                        | 363 |
| 5.1.6.11.4.    | SIM Toolkit terminal Attach - #STTA .....                      | 364 |
| 5.1.6.12.      | Phonebook AT Commands Set .....                                | 365 |
| 5.1.6.12.1.    | Read Group Entries - #CPBGR .....                              | 365 |
| 5.1.6.12.2.    | Write Group Entries - #CPBGW .....                             | 366 |
| 5.1.6.13.      | GPS AT Commands Set .....                                      | 367 |
| 5.1.6.13.1.    | GPS Controller Power Management - \$GPSP .....                 | 367 |
| 5.1.6.13.2.    | GPS Reset - \$GPSR .....                                       | 367 |
| 5.1.6.13.3.    | Unsolicited NMEA Data Configuration - \$GPSNMUN .....          | 368 |
| 5.1.6.13.4.    | Get Acquired Position - \$GPSACP .....                         | 370 |
| 5.1.6.13.5.    | Save GPS Parameters Configuration - \$GPSSAV .....             | 371 |
| 5.1.6.13.6.    | Restore To Default GPS Parameters - \$GPSRST .....             | 371 |
| 5.1.6.13.7.    | GPS NVRAM Parameters Delete - \$GPSNVRAM .....                 | 372 |
| 5.1.6.13.8.    | GPS Quality of Service - \$GPSQOS .....                        | 372 |
| 5.1.6.13.9.    | GPS Start Location Service Request - \$GPSSLR .....            | 374 |

## 6. LIST OF ACRONYMS .....430

### 6.1. DOCUMENT HISTORY .....432

# 1. Introduction

## 1.1. Scope

This document is aimed in providing an detailed specification and a comprehensive listing as a reference for the whole set of AT command.

## 1.2. Audience

Readers of this document should be familiar with Telit modules and their ease of controlling by means of AT Commands.

## 1.3. Contact Information, Support

For general contact, technical support, to report documentation errors and to order manuals, contact Telit Technical Support Center (TTSC) at:

[TS-EMEA@telit.com](mailto:TS-EMEA@telit.com)

[TS-NORTHAMERICA@telit.com](mailto:TS-NORTHAMERICA@telit.com)

[TS-LATINAMERICA@telit.com](mailto:TS-LATINAMERICA@telit.com)

[TS-APAC@telit.com](mailto:TS-APAC@telit.com)

Alternatively, use:

<http://www.telit.com/en/products/technical-support-center/contact.php>

For detailed information about where you can buy the Telit modules or for recommendations on accessories and components visit:

<http://www.telit.com>

To register for product news and announcements or for product questions contact Telit Technical Support Center (TTSC).

Our aim is to make this guide as helpful as possible. Keep us informed of your comments and suggestions for improvements.

Telit appreciates feedback from the users of our information.

## 1.4. Document Organization

This document contains the following chapters:

Chapter 1: “Introduction” provides a scope for this document, target audience, contact and support information, and text conventions.

Chapter 2: “Overview” about the aim of this document and implementation suggestions.

Chapter 3: “AT Commands” AT Commands Basic Definitions

Chapter 4: “AT Commands Availability Table” Differences between the products variants

Chapter 5: “AT Commands References” The core of this specification

## 1.5. Text Conventions

**Danger – This information *MUST* be followed or catastrophic equipment failure or bodily injury may occur.**

***Caution or Warning – Alerts the user to important points about integrating the module, if these points are not followed, the module and end user equipment may fail or malfunction.***

**Tip or Information – Provides advice and suggestions that may be useful when integrating the module.**

All dates are in ISO 8601 format, i.e. YYYY-MM-DD.

- Hayes standard AT command set

## 2. Overview

### 2.1. About the document

This document is to describe all AT commands implemented on the Telit wireless modules listed on the Applicability Table.

## 3. AT COMMANDS

The Telit wireless module family can be controlled via the serial interface using the standard AT commands<sup>2</sup>. The Telit wireless module family is compliant with:

1. Hayes standard AT command set, in order to maintain the compatibility with existing SW programs.
2. 3GPP TS 27.007 specific AT command and GPRS specific commands.
3. 3GPP TS 27.005 specific AT commands for SMS (Short Message Service) and CBS (Cell Broadcast Service)

Moreover Telit wireless module family supports also Telit proprietary AT commands for special purposes.

The following is a description of how to use the AT commands with the Telit wireless module family.

### 3.1. Definitions

The following syntactical definitions apply:

- <CR> Carriage return character**, is the command line and result code terminator character, which value, in decimal ASCII between 0 and 255, is specified within parameter **S3**. The default value is 13.
- <LF> Linefeed character**, is the character recognised as line feed character. Its value, in decimal ASCII between 0 and 255, is specified within parameter **S4**. The default value is 10. The line feed character is output after carriage return character if verbose result codes are used (**V1** option used ) otherwise, if numeric format result codes are used (**V0** option used) it will not appear in the result codes.
- <...>** Name enclosed in angle brackets is a syntactical element. They do not appear in the command line.
- [...]** Optional subparameter of a command or an optional part of TA information response is enclosed in square brackets. Brackets themselves do not appear in the command line. When subparameter is not given in AT commands which have a Read command, new value equals to its previous value. In AT commands which do not store the values of any of their subparameters, and so have not a Read command, which are called *action type* commands, action should be done on the basis of the recommended default setting of the subparameter.

<sup>2</sup> The AT is an ATTENTION command and is used as a prefix to other parameters in a string. The AT command combined with other parameters can be set up in the communications package or typed in manually as a command line instruction. combined with other parameters can be set up in the communications package or typed in manually as a command line instruction.

## 3.2. AT Command Syntax

The syntax rules followed by Telit implementation of either Hayes AT commands, GSM commands are very similar to those of standard basic and extended AT commands. There are two types of extended command:

- **Parameter type commands.** This type of commands may be “set” (to store a value or values for later use), “read” (to determine the current value or values stored), or “tested” (to determine ranges of values supported). Each of them has a test command (trailing =?) to give information about the type of its subparameters; they also have a Read command (trailing ?) to check the current values of subparameters.
- **Action type commands.** This type of command may be “executed” or “tested”.
  - “executed” to invoke a particular function of the equipment, which generally involves more than the simple storage of a value for later use
  - “tested” to determine:
    - if subparameters are associated with the action, the ranges of subparameters values that are supported; if the command has no subparameters, issuing the correspondent Test command (trailing =?) raises the result code “**ERROR**”.

Note: issuing the Read command (trailing ?) causes the command to be executed.

whether or not the equipment implements the Action Command (in this case issuing the correspondent Test command - trailing =? - returns the **OK** result code), and, if subparameters are associated with the action, the ranges of subparameters values that are supported.

Action commands don’t store the values of any of their possible subparameters.

Moreover:

The response to the Test Command (trailing =?) may be changed in the future by Telit to allow the description of new values/functionalities.

If all the subparameters of a parameter type command +**CMD** are optional, issuing **AT+CMD=<CR>** causes the **OK** result code to be returned and the previous values of the omitted subparameters to be retained.

### 3.2.1. String Type Parameters

A string, either enclosed between quotes or not, is considered to be a valid string type parameter input. According to V25.ter space characters are ignored on the command line and may be used freely for formatting purposes, unless they are embedded in numeric or quoted string constants; therefore a string containing a space character has to be enclosed between quotes to be considered a valid string type parameter (e.g. typing **AT+COPS=1,0,"A1"** is the same as typing **AT+COPS=1,0,A1**; typing **AT+COPS=1,0,"A BB"** is different from typing **AT+COPS=1,0,A BB**).

A string is always case sensitive.

A small set of commands requires always to write the input string parameters within quotes: this is explicitly reported in the specific descriptions.

### 3.2.2. Command Lines

A command line is made up of three elements: the **prefix**, the **body** and the **termination character**.

The **command line prefix** consists of the characters "**AT**" or "**at**", or, to repeat the execution of the previous command line, the characters "**A/**" or "**a/**" or **AT#**/ or **at#**/.

The **termination character** may be selected by a user option (parameter S3), the default being **<CR>**.

The basic structures of the command line are:

- **ATCMD1<CR>** where **AT** is the command line prefix, **CMD1** is the body of a **basic command** (nb: the name of the command never begins with the character "+") and **<CR>** is the command line terminator character
- **ATCMD2=10<CR>** where 10 is a subparameter
- **AT+CMD1;+CMD2=,10<CR>** These are two examples of **extended commands** (nb: the name of the command always begins with the character "+")<sup>3</sup>. They are delimited with semicolon. In the second command the subparameter is omitted.
- **+CMD1?<CR>** This is a Read command for checking current subparameter values
- **+CMD1=?<CR>** This is a test command for checking possible subparameter values

These commands might be performed in a single command line as shown below:

**ATCMD1 CMD2=10+CMD1;+CMD2=,10;+CMD1?;+CMD1=?<CR>**

<sup>3</sup> The set of **proprietary AT commands** differentiates from the standard one because the name of each of them begins with either "@", "#", "\$" or "\*". **Proprietary AT commands** follow the same syntax rules as **extended commands**

anyway it is always preferable to separate into different command lines the basic commands and the extended commands; furthermore it is suggested to avoid placing several action commands in the same command line, because if one of them fails, then an error message is received but it is not possible to argue which one of them has failed the execution.

If command **V1** is enabled (verbose responses codes) and all commands in a command line has been performed successfully, result code **<CR><LF>OK<CR><LF>** is sent from the TA to the TE, if subparameter values of a command are not accepted by the TA or command itself is invalid, or command cannot be performed for some reason, result code **<CR><LF>ERROR<CR><LF>** is sent and no subsequent commands in the command line are processed.

If command **V0** is enabled (numeric responses codes), and all commands in a command line has been performed successfully, result code **0<CR>** is sent from the TA to the TE, if sub-parameter values of a command are not accepted by the TA or command itself is invalid, or command cannot be performed for some reason, result code **4<CR>** and no subsequent commands in the command line are processed.

In case of errors depending on ME operation, **ERROR** (or **4**) response may be replaced by **+CME ERROR: <err>** or **+CMS ERROR: <err>**.

#### NOTE:

The command line buffer accepts a maximum of 80 characters. If this number is exceeded none of the commands will be executed and TA returns **ERROR**.

#### 3.2.2.1. ME Error Result Code - +CME ERROR: <err>

This is NOT a command, it is the error response to **+Cxxx 3GPP TS 27.007** commands.  
Syntax: **+CME ERROR: <err>**

Parameter: **<err>** - error code can be either numeric or verbose (see **+CMEE**). The possible values of **<err>** are reported in the table:

| Numeric Format | Verbose Format              |
|----------------|-----------------------------|
| General Errors |                             |
| 0              | phone failure               |
| 1              | No connection to phone      |
| 2              | phone-adaptor link reserved |
| 3              | operation not allowed       |
| 4              | operation not supported     |
| 5              | PH-SIM PIN required         |
| 10             | SIM not inserted            |
| 11             | SIM PIN required            |
| 12             | SIM PUK required            |
| 13             | SIM failure                 |
| 14             | SIM busy                    |

| Numeric Format                                                           | Verbose Format                                   |
|--------------------------------------------------------------------------|--------------------------------------------------|
| 15                                                                       | SIM wrong                                        |
| 16                                                                       | incorrect password                               |
| 17                                                                       | SIM PIN2 required                                |
| 18                                                                       | SIM PUK2 required                                |
| 20                                                                       | memory full                                      |
| 21                                                                       | invalid index                                    |

| 573                                   | network reject                   |
| <b>Custom SIM Lock related errors</b> |                                  |
| 586                                   | MCL personalisation PIN required |
| <b>FTP related errors</b>             |                                  |
| 600                                   | generic undocumented error       |
| 601                                   | wrong state                      |
| 602                                   | Can not activate                 |
| 603                                   | Can not resolve name             |
| 604                                   | Can not allocate control socket  |
| 605                                   | Can not connect control socket   |
| 606                                   | Bad or no response from server   |
| 607                                   | Not connected                    |
| 608                                   | Already connected                |
| 609                                   | Context down                     |
| 610                                   | No photo available               |
| 611                                   | Can not send photo               |
| 612                                   | Resource used by other instance  |

\*(values in parentheses are GSM 04.08 cause codes)

### 3.2.2.2. Message Service Failure Result Code - +CMS ERROR: <err>

This is NOT a command, it is the error response to +Cxxx 3GPP TS 27.005 commands.

Syntax: +CMS ERROR: <err>

Parameter: <err> - numeric error code.

The <err> values are reported in the table:

| Numeric Format | Meaning                                   |
|----------------|-------------------------------------------|
| 0...127        | GSM 04.11 Annex E-2 values                |
| 128...255      | 3GPP TS 23.040 sub clause 9.2.3.22 values |
| 300            | ME failure                                |
| 301            | SMS service of ME reserved                |
| 302            | operation not allowed                     |
| 303            | operation not supported                   |
| 304            | invalid PDU mode parameter                |
| 305            | invalid text mode parameter               |
| 310            | SIM not inserted                          |
| 311            | SIM PIN required                          |
| 312            | PH-SIM PIN required                       |
| 313            | SIM failure                               |
| 314            | SIM busy                                  |
| 315            | SIM wrong                                 |
| 316            | SIM PUK required                          |
| 317            | SIM PIN2 required                         |
| 318            | SIM PUK2 required                         |
| 320            | memory failure                            |
| 321            | invalid memory index                      |
| 322            | memory full                               |
| 330            | SMSC address unknown                      |

| 512            | FDN not allowed number                    |

### 3.2.3.

The TA response, in case of verbose response format enabled, for the previous examples command line could be as shown below:

- information response to +**CMD1**?  
`<CR><LF>+CMD1:2,1,10<CR><LF>`
- information response to +**CMD1**=?  
`<CR><LF>+CMD1(0-2),(0,1),(0-15)<CR><LF>`
- final result code `<CR><LF>OK<CR><LF>`

Moreover there are other two types of result codes:

- *result codes* that inform about progress of TA operation (e.g. connection establishment **CONNECT**)
- *result codes* that indicate occurrence of an event not directly associated with issuance of a command from TE (e.g. ring indication **RING**).

Here the basic result codes according to ITU-T V25Ter recommendation

| <i>Result Codes</i> |                                              |
|---------------------|----------------------------------------------|
| <b>Numeric form</b> | <b>Verbose form</b>                          |
| 0                   | OK                                           |
| 1                   | CONNECT<br>or<br>CONNECT <text> <sup>4</sup> |
| 2                   | RING                                         |
| 3                   | NO CARRIER                                   |
| 4                   | ERROR                                        |
| 6                   | NO DIALTONE                                  |
| 7                   | BUSY                                         |
| 8                   | NO ANSWER                                    |
| 10                  | CONNECT 2400 <sup>4</sup>                    |
| 11                  | CONNECT 4800 <sup>4</sup>                    |
| 12                  | CONNECT 9600 <sup>4</sup>                    |
| 15                  | CONNECT 14400 <sup>4</sup>                   |
| 23                  | CONNECT 1200/75 <sup>4</sup>                 |

<sup>4</sup> <text> can be "300", "1200", "2400", "4800", "9600", "14400" or "1200/75"

### 3.2.4. Command Response Time-Out

Every command issued to the Telit modules returns a result response, if response codes are enabled (default). The time needed to process the given command and return the response varies, depending on the command type. Commands that do not interact with the SIM or the network, and only involve internal setups or readings, have an immediate response. Commands that interact with the SIM or the network could take many seconds to send a response, depending on SIM configuration (e.g., number of contacts stored in the phonebook, number of stored SMS), or on the network the command may interact with.

### 3.2.5. Command Issuing Timing

The chain Command -> Response shall always be respected and a new command must not be issued before the module has terminated all the sending of its response result code (whatever it may be).

This applies especially to applications that “sense” the **OK** text and therefore may send the next command before the complete code **<CR><LF>OK<CR><LF>** is sent by the module.

It is advisable anyway to wait for at least 20ms between the end of the reception of the response and the issue of the next AT command.

If the response codes are disabled and therefore the module does not report any response to the command, then at least the 20ms pause time shall be respected.

## 3.3. Storage

### 3.3.1. Factory Profile And User Profiles

The Telit wireless modules stores the values set by several commands in the internal non volatile memory (NVM), allowing to remember this setting even after power off. In the NVM these values are set either as **factory profile** or as **user profiles**: there are **two customizable user profiles** and **one factory profile** in the NVM of the device: by default the device will start with user profile 0 equal to factory profile.

For backward compatibility each profile is divided into two sections, one **base section** which was historically the one that was saved and restored in early releases of code, and the **extended section** which includes all the remaining values.

The **&W** command is used to save the actual values of **both sections** of profiles into the NVM user profile.

Commands **&Y** and **&P** are both used to set the profile to be loaded at startup. **&Y** instructs the device to load at startup only the **base section**. **&P** instructs the device to load at startup the full profile: **base + extended sections**.

The **&F** command resets to factory profile values only the command of the base section of profile, while the **&F1** resets to factory profile values the full set of base + extended section commands.

## HE910/UE910 AT Commands Reference Guide

80378ST10091A Rev. 5 – 2013-07-01

The values set by other commands are stored in NVM outside the profile: some of them are stored always, without issuing any **&W**, some other are stored issuing specific commands (**+CSAS**, **#SLEDSAV**, **#VAUXSAV**, **#SKTSAV**, **#ESAV**); all of these values are read at power-up.

The values set by following commands are stored in the profile base section; they depend on the specific AT instance:

|                            |                                   |
|----------------------------|-----------------------------------|
| <b>DTE SPEED</b>           | <b>+IPR</b>                       |
| <b>DTE FORMAT</b>          | <b>+ICF</b>                       |
| <b>GSM DATA MODE</b>       | <b>+CBST</b>                      |
| <b>AUTOBAUD</b>            | <b>+IPR</b>                       |
| <b>COMMAND ECHO</b>        | <b>E</b>                          |
| <b>RESULT MESSAGES</b>     | <b>Q</b>                          |
| <b>VERBOSE MESSAGES</b>    | <b>V</b>                          |
| <b>EXTENDED MESSAGES</b>   | <b>X</b>                          |
| <b>DSR (C107) OPTIONS</b>  | <b>&amp;S</b>                     |
| <b>DTR (C108) OPTIONS</b>  | <b>&amp;D</b>                     |
| <b>RI (C125) OPTIONS</b>   | <b>\R</b>                         |
| <b>POWER SAVING</b>        | <b>+CFUN</b>                      |
| <b>DEFAULT PROFILE</b>     | <b>&amp;Y</b>                     |
| <b>S REGISTERS</b>         | <b>S0;S3;S4;S5;S7;S25;S30;S38</b> |
| <b>BEARER SERVICE NAME</b> | <b>+CBST</b>                      |

The values set by following commands are stored in the profile extended section and they depend on the specific AT instance (see **+CMUX**):

|                 |                 |                  |
|-----------------|-----------------|------------------|
| <b>+FCLASS</b>  | <b>+CSCS</b>    | <b>+CR</b>       |
| <b>+CREG</b>    | <b>+CLIP</b>    | <b>+CRLP</b>     |
| <b>+CRC</b>     | <b>+CLIR</b>    | <b>+CSVM</b>     |
| <b>+CCWA</b>    | <b>+CUSD</b>    | <b>+CAOC</b>     |
| <b>+CSSN</b>    | <b>+CIND</b>    | <b>+CMER</b>     |
| <b>+CPBS</b>    | <b>+CMEE</b>    | <b>+CGREG</b>    |
| <b>+CGEREP</b>  | <b>+CMGF</b>    | <b>+CSDH</b>     |
| <b>+CNMI</b>    | <b>#QSS</b>     | <b>#ECAM</b>     |
| <b>#SMOV</b>    | <b>#MWI</b>     | <b>#NITZ</b>     |
| <b>#SKIPESC</b> | <b>#CFF</b>     | <b>#STIA</b>     |
| <b>+CSTF</b>    | <b>+CSDF</b>    | <b>+CTZU</b>     |
| <b>+CAPD</b>    | <b>+CCWE</b>    | <b>+CSIL</b>     |
| <b>+CTZR</b>    | <b>#NWEN</b>    | <b>#PSNT</b>     |
| <b>#SIMPR</b>   | <b>+COLP</b>    | <b>#CESTHLCK</b> |
| <b>+DR</b>      | <b>\$GPSNUM</b> | <b>+CSTA</b>     |
| <b>+NCIH</b>    |                 |                  |

The values set by following commands are stored in the profile extended section and they don't depend on the specific AT instance (see **+CMUX**):

|                      |                   |                     |
|----------------------|-------------------|---------------------|
| +CALM                | +CRSL             | +CMUT <sup>5</sup>  |
| +CLVL <sup>5</sup>   | +VTD              | +CSCB <sup>5</sup>  |
| #CAP <sup>5</sup>    | #SRS <sup>5</sup> | #SRP <sup>5</sup>   |
| #STM <sup>5</sup>    | #TSVOL            | #E2SMSRI            |
| #PSEL                | #CODEC            | #SHFEC <sup>5</sup> |
| #HFMICG <sup>5</sup> | #HSMICG           | #SHFSD <sup>5</sup> |
| #SPKMUT              | #NITZ             | #E2SLRI             |
| #HFRECG              | #HSRECG           | #SHFAGC             |
| #SHSAGC              | #SHSEC            | #SHSNR              |
| #SHFNR               | #SHSSD            | #DVI                |
| #DVIEXT              | #PSMRI            |                     |

The values set by following commands are automatically stored in NVM, without issuing any storing command and independently from the profile (unique values), and are automatically restored at startup:

|          |                    |          |
|----------|--------------------|----------|
| #SELINT  | +COPS <sup>6</sup> | +CGCLASS |
| +CGDCONT | +CGQMIN            | +CGQREQ  |
| #ENS     | #SCFG              | #AUTOATT |
| #DNS     | #ICMP              | #GSMCONT |
| +CGSMS   | +CGEOMIN           | +CGEOREQ |

The values set by following commands are stored in NVM on demand, issuing specific commands and independently from the profile:

|       |       |       |
|-------|-------|-------|
| +CSCA | +CSMP | +CSCB |
|-------|-------|-------|

stored by +CSAS<sup>7</sup> command and restored by +CRES<sup>9</sup> command

|       |  |  |
|-------|--|--|
| #SLED |  |  |
|-------|--|--|

stored by #SLEDSAV command

|       |  |  |
|-------|--|--|
| #VAUX |  |  |
|-------|--|--|

*stored by #VAUXSAV command*

|         |        |         |
|---------|--------|---------|
| #USERID | #PASSW | #PKTSZ  |
| #DSTO   | #SKTTO | #SKTSET |
| #SKTCT  |        |         |

<sup>5</sup> +CSCB is still stored in the profile extended section only for backward compatibility issues: its actual storing and restoring are accomplished issuing **+CSAS** and **+CRES**

<sup>6</sup> It is partially stored in NVM; see command description.

<sup>7</sup> Both commands +**CS** (see §3.x.3.2.5) and +**CRES** (see §3.x.3.2.6) deal with non-volatile memory, intending for it either the NVM and the SIM storage.

## HE910/UE910 AT Commands Reference Guide

80378ST10091A Rev. 5 – 2013-07-01

stored by #SKTSAV command and automatically restored at startup; factory default valutes are restored by #SKTRST command

|         |        |        |
|---------|--------|--------|
| #ESMTP  | #EADDR | #EUSER |
| #EPASSW |        |        |

stored by #ESAV command and automatically restored at startup; factory default valutes are restored by #ERST command.

|          |          |            |
|----------|----------|------------|
| \$GPSP   | \$GPSR   | \$GPSNVRAM |
| \$GPSQOS | \$GPSSLR | \$GPSSTOP  |

stored by \$GPSSAV command and automatically restored at startup; factory default valutes are restored by \$GPSRST command

|               |              |             |
|---------------|--------------|-------------|
| #BIQUADIN     | # BIQUADINEX | # BIQUADOUT |
| # BIQUADOUTEX |              |             |

stored by #PSAV command and automatically restored at startup; factory default valutes are restored by #PRST command.

**4.**

The following table highlights the availability of commands which are not shared between all the versions of the product (● = Supported; X = Not Supported):

| COMMAND    | HE910-G | HE910-DG | HE910-D | HE910-GA | HE910-EUG | HE910-EUR | HE910-EUD | HE910-NAG | HE910-NAR | HE910-NAD | UE910-EUR | UE910-EUD | UE910-NAR | UE910-NAD |
|------------|---------|----------|---------|----------|-----------|-----------|-----------|-----------|-----------|-----------|-----------|-----------|-----------|-----------|

## 5. AT Commands References

### 5.1. Command Line General Format

#### 5.1.1. Command Line Prefixes

##### 5.1.1.1. Starting A Command Line - AT

| AT - Starting A Command Line |                                                                                                                                                                                                     | SELINT 2 |
|------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| AT                           | The prefix <b>AT</b> , or <b>at</b> , is a two-character abbreviation ( <b>ATtention</b> ), always used to start a command line to be sent from TE to TA, with the only exception of AT#/<br>prefix |          |
| Reference                    | 3GPP TS 27.007                                                                                                                                                                                      |          |

##### 5.1.1.1.2. Last Command Automatic Repetition - A/

| A/ - Last Command Automatic Repetition |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | SELINT 2 |
|----------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| A/                                     | <p>If the prefix <b>A/</b> or <b>a/</b> is issued, the MODULE immediately execute once again the body of the preceding command line. No editing is possible and no termination character is necessary. A command line may be repeated multiple times through this mechanism, if desired.</p> <p>If <b>A/</b> is issued before any command line has been executed, the preceding command line is assumed to have been empty (that results in an <b>OK</b> result code).</p> <p>Note: this command works only at fixed IPR.</p> <p>Note: the custom prefix AT#/<br/>has been defined: it causes the last command to be executed again too; but it doesn't need a fixed IPR.</p> |          |
| Reference                              | V25ter                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |          |

#### 5.1.3.1.18. Display Last Connection Statistics - &V2

| &V2 - Display Last Connection Statistics |                                                                                       | SELINT 2 |
|------------------------------------------|---------------------------------------------------------------------------------------|----------|
| AT&V2                                    | Execution command returns the last connection statistics & connection failure reason. |          |

#### 5.1.3.1.19. Single Line Connect Message - \V

| \V - Single Line Connect Message |                                                                                                                  | SELINT 2 |
|----------------------------------|------------------------------------------------------------------------------------------------------------------|----------|
| AT\V<n>                          | <p>Execution command set single line connect message.</p> <p>Parameter:<br/>&lt;n&gt;<br/>0 - off<br/>1 - on</p> |          |

#### 5.1.3.1.20. Country Of Installation - +GCI

| <b>+GCI - Country Of Installation</b> |                                                                                                                                                                        | <b>SELINT 2</b> |
|---------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|
| <b>AT+GCI=&lt;code&gt;</b>            | Set command selects the installation country code according to ITU-T.35 Annex A.<br><br>Parameter:<br><code><br>59 - it currently supports only the Italy country code |                 |
| <b>AT+GCI?</b>                        | Read command reports the currently selected country code.                                                                                                              |                 |
| <b>AT+GCI=?</b>                       | Test command reports the supported country codes.                                                                                                                      |                 |
| Reference                             | V25ter.                                                                                                                                                                |                 |

#### 5.1.3.1.21. Line Signal Level - %L

| <b>%L - Line Signal Level</b> |                                                                                       | <b>SELINT 2</b> |
|-------------------------------|---------------------------------------------------------------------------------------|-----------------|
| <b>AT%L</b>                   | It has no effect and is included only for backward compatibility with landline modems |                 |

#### 5.1.3.1.22. Line Quality - %Q

| <b>%Q - Line Quality</b> |                                                                                       | <b>SELINT 2</b> |
|--------------------------|---------------------------------------------------------------------------------------|-----------------|
| <b>AT%Q</b>              | It has no effect and is included only for backward compatibility with landline modems |                 |

#### 5.1.3.1.23. Speaker Loudness - L

| <b>L - Speaker Loudness</b> |                                                                                       | <b>SELINT 2</b> |
|-----------------------------|---------------------------------------------------------------------------------------|-----------------|
| <b>ATL&lt;n&gt;</b>         | It has no effect and is included only for backward compatibility with landline modems |                 |

#### 5.1.3.1.24. Speaker Mode - M

| <b>M - Speaker Mode</b> |                                                                                       | <b>SELINT 2</b> |
|-------------------------|---------------------------------------------------------------------------------------|-----------------|
| <b>ATM&lt;n&gt;</b>     | It has no effect and is included only for backward compatibility with landline modems |                 |

### 5.1.3.2. DTE - Modem Interface Control

#### 5.1.3.2.1. Command Echo - E

| E - Command Echo |                                                                                                                                                                                                                                                                                                                                                               | SELINT 2 |
|------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| ATE[<n>]         | <p>Set command enables/disables the command echo.</p> <p>Parameter:<br/>&lt;n&gt;<br/>0 - disables command echo<br/>1 - enables command echo (factory default) , hence command sent to the device are echoed back to the <b>DTE</b> before the response is given.</p> <p>Note: if parameter is omitted, the command has the same behaviour of <b>ATE0</b></p> |          |
| Reference        | V25ter                                                                                                                                                                                                                                                                                                                                                        |          |

#### 5.1.3.2.2. Quiet Result Codes - Q

| Q - Quiet Result Codes |                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | SELINT 2 |
|------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| ATQ[<n>]               | <p>Set command enables or disables the result codes.</p> <p>Parameter:<br/>&lt;n&gt;<br/>0 - enables result codes (factory default)<br/>1 - disables result codes<br/>2 - disables result codes (only for backward compatibility)</p> <p>Note: After issuing either <b>ATQ1</b> or <b>ATQ2</b> every information text transmitted in response to commands is not affected</p> <p>Note: if parameter is omitted, the command has the same behaviour of <b>ATQ0</b></p> |          |
| Example                | <p>After issuing <b>ATQ1</b> or <b>ATQ2</b></p> <p>AT+CGACT=?<br/><b>+CGACT: (0-1) nothing is appended to the response</b></p>                                                                                                                                                                                                                                                                                                                                        |          |
| Reference              | V25ter                                                                                                                                                                                                                                                                                                                                                                                                                                                                |          |

### 5.1.3.2.3. Response Format - V

| V - Response Format   | SELINT 2                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                       |                                         |              |                                       |                       |                                                                        |              |                                                                                |

### 5.1.3.6. S Parameters

Basic commands that begin with the letter “S” are known as “**S-Parameters**”. The number following the “S” indicates the “parameter number” being referenced. If the number is not recognized as a valid parameter number, an **ERROR** result code is issued.

If no value is given for the subparameter of an **S-Parameter**, an **ERROR** result code will be issued and the stored value left unchanged.

Reference: V25ter

#### 5.1.3.6.1. Number Of Rings To Auto Answer - S0

| S0 - Number Of Rings To Auto Answer |                                                                                                                                                                                                                                                            | SELINT 2 |
|-------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| <b>ATS0=[&lt;n&gt;]</b>             | Set command sets the number of rings required before device automatically answers an incoming call.<br><br>Parameter:<br><n> - number of rings<br>0 - auto answer disabled (factory default)<br>1..255 - number of rings required before automatic answer. |          |
| <b>ATS0?</b>                        | Read command returns the current value of <b>S0 parameter</b> .                                                                                                                                                                                            |          |

### 5.1.4.1. General

#### 5.1.4.1.1. Request Manufacturer Identification - +CGMI

| +CGMI - Request Manufacturer Identification |                                                                                             | SELINT 2 |
|---------------------------------------------|---------------------------------------------------------------------------------------------|----------|
| AT+CGMI                                     | Execution command returns the device manufacturer identification code without command echo. |          |
| AT+CGMI=?                                   | Test command returns <b>OK</b> result code.                                                 |          |
| Reference                                   | 3GPP TS 27.007                                                                              |          |

#### 5.1.4.1.2. Request Model Identification - +CGMM

| +CGMM - Request Model Identification |                                                                                      | SELINT 2 |
|--------------------------------------|--------------------------------------------------------------------------------------|----------|
| AT+CGMM                              | Execution command returns the device model identification code without command echo. |          |
| AT+CGMM=?                            | Test command returns <b>OK</b> result code.                                          |          |
| Reference                            | 3GPP TS 27.007                                                                       |          |

#### 5.1.4.1.3. Request Revision Identification - +CGMR

| +CGMR - Request Revision Identification |                                                                                 | SELINT 2 |
|-----------------------------------------|---------------------------------------------------------------------------------|----------|
| AT+CGMR                                 | Execution command returns device software revision number without command echo. |          |
| AT+CGMR=?                               | Test command returns <b>OK</b> result code.                                     |          |
| Reference                               | 3GPP TS 27.007                                                                  |          |

#### 5.1.4.1.4. Request Product Serial Number Identification - +CGSN

| +CGSN - Request Product Serial Number Identification |                                                                                                                  | SELINT 2 |
|------------------------------------------------------|------------------------------------------------------------------------------------------------------------------|----------|
| AT+CGSN                                              | Execution command returns the product serial number, identified as the IMEI of the mobile, without command echo. |          |
| AT+CGSN=?                                            | Test command returns <b>OK</b> result code.                                                                      |          |
| Reference                                            | 3GPP TS 27.007                                                                                                   |          |

#### 5.1.4.1.5. Select TE Character Set - +CSCS

| +CSCS - Select TE Character Set |                                                                                                                                                                                                                                                                                                                                                                                                              | SELINT 2 |
|---------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| <b>AT+CSCS=[&lt;chset&gt;]</b>  | Set command sets the current character set used by the device.<br><br>Parameter:<br><b>&lt;chset&gt;</b> - character set<br>"GSM" - GSM default alphabet (3GPP TS 23.038)<br>"IRA" - international reference alphabet (ITU-T T.50)<br>"8859-1" - ISO 8859 Latin 1 character set<br>"PCCP437" - PC character set Code Page 437<br>"UCS2" - 16-bit universal multiple-octet coded character set (ISO/IEC10646) |          |
| <b>AT+CSCS?</b>                 | Read command returns the current value of the active character set.                                                                                                                                                                                                                                                                                                                                          |          |
| <b>AT+CSCS=?</b>                | Test command returns the supported values for parameter <b>&lt;chset&gt;</b> .                                                                                                                                                                                                                                                                                                                               |          |
| Reference                       | 3GPP TS 27.007                                                                                                                                                                                                                                                                                                                                                                                               |          |

#### 5.1.4.1.6. International Mobile Subscriber Identity (IMSI) - +CIMI

| +CIMI - Request International Mobile Subscriber Identify (IMSI) |                                                                                                                                                                                                                                      | SELINT 2 |
|-----------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| <b>AT+CIMI</b>                                                  | Execution command returns the value of the Internal Mobile Subscriber Identity stored in the SIM without command echo.<br><br>Note: a SIM card must be present in the SIM card housing, otherwise the command returns <b>ERROR</b> . |          |
| <b>AT+CIMI=?</b>                                                | Test command returns <b>OK</b> result code.                                                                                                                                                                                          |          |
| Reference                                                       | 3GPP TS 27.007                                                                                                                                                                                                                       |          |

#### 5.1.4.1.7. Multiplexing Mode - +CMUX

| +CMUX - Multiplexing Mode                                                                                                                     | SELINT 2                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| <b>AT+CHLD=[&lt;n&gt;]</b>           | <p>Execution command controls the network call hold service. With this service it is possible to disconnect temporarily a call and keep it suspended while it is retained by the network, contemporary it is possible to connect another party or make a multiparty connection.</p> <p>Parameter:<br/>&lt;n&gt;</p> <ul style="list-style-type: none"> <li>0 - releases all held calls, or sets the UDUB (User Determined User Busy) indication for a waiting call. (only from version D)</li> <li>1 - releases all active calls (if any exist), and accepts the other (held or waiting) call</li> <li>1X - releases a specific active call X</li> <li>2 - places all active calls (if any exist) on hold and accepts the other (held or waiting) call.</li> <li>2X - places all active calls on hold except call X with which communication shall be supported (only from version D).</li> <li>3 - adds an held call to the conversation</li> <li>4 - connects the two calls and disconnects the subscriber from both calls (Explicit Call Transfer (ECT))</li> </ul> <p>Note: "X" is the numbering (starting with 1) of the call given by the sequence of setting up or receiving the calls (active, held or waiting) as seen by the served subscriber. Calls hold their number until they are released. New calls take the lowest available number.</p> <p>Note: where both a held and a waiting call exist, the above procedures apply to the waiting call (i.e. not to the held call) in conflicting situation.</p> |                 |

| +CFUN - Set Phone Functionality                       | SELINT 2                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|-------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>AT+CFUN=</b><br><b>[&lt;fun&gt;[,&lt;rst&gt;]]</b> | <p>Set command selects the level of functionality in the ME.</p> <p>Parameters:</p> <p><b>&lt;fun&gt;</b> - is the power saving function mode</p> <ul style="list-style-type: none"> <li>0 - minimum functionality, NON-CYCLIC SLEEP mode: in this mode, the AT interface is not accessible. Consequently, once you have set <b>&lt;fun&gt;</b> level 0, do not send further characters. Otherwise these characters remain in the input buffer and may delay the output of an unsolicited result code. The first wake-up event, or rising RTS line, stops power saving and takes the ME back to full functionality level <b>&lt;fun&gt;=1</b>.</li> <li>1 - mobile full functionality with power saving disabled (factory default)</li> <li>4 - disable both TX and RX</li> <li>5 - mobile full functionality with power saving enabled</li> <li>7 - CYCLIC SLEEP mode: in this mode, the serial interface is periodically enabled while CTS is active. If characters are recognized on the serial interface, the ME stays active for 2 seconds after the last character was sent or received. ME exits SLEEP mode only, if AT+CFUN=1 is entered</li> <li>9 - just as 0 but with different wake-up events (see SW User Guide)</li> </ul> <p><b>&lt;rst&gt;</b> - reset flag</p> <ul style="list-style-type: none"> <li>0 - do not reset the ME before setting it to <b>&lt;fun&gt;</b> functionality level</li> <li>1 - reset the device. The device is fully functional after the reset. This value is available only for <b>&lt;fun&gt; = 1</b></li> </ul> <p>Note: issuing <b>AT+CFUN=4[,0]</b> actually causes the module to perform either a network deregistration and a SIM deactivation.</p> <p>Note: if power saving enabled, it reduces the power consumption during the idle time, thus allowing a longer standby time with a given battery capacity.</p> <p>Note: to place the module in power saving mode, set the <b>&lt;fun&gt;</b> parameter at value = 5 and the line <b>DTR</b> (RS232) must be set to <b>OFF</b>. Once in power saving, the <b>CTS</b> line switch to the <b>OFF</b> status to signal that the module is really in power saving condition.</p> <p>During the power saving condition, before sending any <b>AT</b> command on the serial line, the <b>DTR</b> must be set to <b>ON</b> (0V) to exit from power saving and it must be waited for the <b>CTS</b> (RS232) line to go in <b>ON</b> status.</p> <p>Until the <b>DTR</b> line is <b>ON</b>, the module will not return back in the power saving condition</p> <p>Note: the power saving function does not affect the network behaviour of the module, even during the power save condition the module remains registered on the network and reachable for incoming calls or SMS. If a call incomes during the power save, then the module will wake up and proceed normally with the unsolicited incoming call code</p> |

| <b>+CFUN - Set Phone Functionality</b> |                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>SELINT 2</b> |

| +CMER - Mobile Equipment Event Reporting           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | SELINT 2 |
|----------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| AT+CMER=[<mode>[,<keyp>[,<disp>[,<ind>[,<bfr>]]]]] | <p>Set command enables/disables sending of unsolicited result codes from TA to TE in the case of indicator state changes (<del>n.b.:</del> sending of URCs in the case of key pressings or display changes are currently not implemented).</p> <p>Parameters:</p> <p>&lt;mode&gt; - controls the processing of unsolicited result codes</p> <p>0 - buffer +CIEV Unsolicited Result Codes.</p> <p>1 - discard +CIEV Unsolicited Result Codes when TA-TE link is reserved (e.g. on-line data mode); otherwise forward them directly to the TE.</p> <p>2 - buffer +CIEV Unsolicited Result Codes in the TA when TA-TE link is reserved (e.g. on-line data mode) and flush them to the TE after reservation; otherwise forward them directly to the TE.</p> <p>3 - forward +CIEV Unsolicited Result Codes directly to the TE; when TA is in on-line data mode each +CIEV URC is replaced with a <b>Break</b> (100 ms), and is stored in a buffer; once the ME goes into command mode (after +++ was entered), all URCs stored in the buffer will be output.</p> <p>&lt;keyp&gt; - keypad event reporting</p> <p>0 - no keypad event reporting</p> <p>&lt;disp&gt; - display event reporting</p> <p>0 - no display event reporting</p> <p>&lt;ind&gt; - indicator event reporting</p> <p>0 - no indicator event reporting</p> <p>2 - indicator event reporting</p> <p>&lt;bfr&gt; - TA buffer clearing</p> <p>0 - TA buffer of unsolicited result codes is cleared when &lt;mode&gt; 1..3 is entered</p> <p>1 - TA buffer of unsolicited result codes is flushed to the TE when &lt;mode&gt; 1...3 is entered (OK response shall be given before flushing the codes)</p> <p>Note: After AT+CMER has been switched on with e.g. AT+CMER=2,0,0,2 command (i.e. &lt;bfr&gt; is 0), URCs for all registered indicators will be issued only first time, if previous &lt;mode&gt; was 0, for backward compatibility. Values shown by the indicators will be current indicators values, not buffered ones. Subsequent AT+CMER commands with &lt;mode&gt; different from 0 and &lt;bfr&gt; equal to 0 will not flush the codes, even if &lt;mode&gt; was set again to 0 before. To flush the codes, &lt;bfr&gt; must be set to 1.</p> <p>Although it is possible to issue the command when SIM PIN is pending, it will answer ERROR if “message” or “smsfull” indicators are enabled in AT+CIND, because with pending PIN it is not possible to give a correct indication about SMS status. To issue the command when SIM PIN is pending you have to disable “message” and “smsfull” indicators in AT+CIND first.</p> |          |

| +CALA - Alarm Management                                                                                                                            | SELINT 2                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|-----------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p><b>AT+CALA=</b><br/> <b>&lt;time&gt;[,&lt;n&gt;,&lt;type&gt;</b><br/> <b>[,&lt;text&gt;,&lt;recurr&gt;</b><br/> <b>[,&lt;silent&gt;]]]]]</b></p> | <p>Set command stores in the internal Real Time Clock an alarm time with respective settings. It is possible to set up a recurrent alarm for one or more days in the week. Currently just one alarm can be set.</p> <p>When the RTC time reaches the alarm time then the alarm starts, the behaviour of the MODULE depends upon the setting <b>&lt;type&gt;</b> and if the device was already ON at the moment when the alarm time had come.</p> <p>Parameters:</p> <p><b>&lt;time&gt;</b> - current alarm time as quoted string<br/>         "" - (empty string) deletes the current alarm and resets all the <b>+CALA</b> parameters to the "factory default" configuration<br/>         "hh:mm:ss±zz" - format to be used only when issuing <b>+CALA</b> with parameter <b>&lt;recurr&gt;</b> too.<br/>         "yy/MM/dd,hh:mm:ss±zz" - generic format: it's the same as defined for <b>+CCLK</b> (see)</p> <p><b>&lt;n&gt;</b> - index of the alarm<br/>         0 - The only value supported is 0.</p> <p><b>&lt;type&gt;</b> - alarm behaviour type<br/>         0 - reserved for other equipment use.<br/>         1 - the MODULE simply wakes up fully operative as if the ON/OFF button had been pressed. If the device is already ON at the alarm time, then it does nothing (default).<br/>         2 - the MODULE wakes up in "alarm mode" if at the alarm time it was off, otherwise it remains fully operative. In both cases the MODULE issues an unsolicited code every 3s:</p> <p style="text-align: center;"><b>+CALA: &lt;text&gt;</b></p> <p style="text-align: center;">where <b>&lt;text&gt;</b> is the <b>+CALA</b> optional parameter previously set.</p> <p>The device keeps on sending the unsolicited code every 3s until a <b>#WAKE</b> or <b>#SHDN</b> command is received or a 90 seconds timer expires. If the device is in "alarm mode" and it does not receive the <b>#WAKE</b> command within 90s then it shuts down.</p> <p>3 - the MODULE wakes up in "alarm mode" if at the alarm time it was off, otherwise it remains fully operative. In both cases the MODULE starts playing the alarm tone on the selected path for the ringer (see command <b>#SRP</b>)<br/>         The device keeps on playing the alarm tone until a <b>#WAKE</b> or <b>#SHDN</b> command is received or a 90 s time-out occurs. If the device is in "alarm mode" and it does not receive the <b>#WAKE</b> command within 90s then it shuts down.</p> <p>4 - the MODULE wakes up in "alarm mode" if at the alarm time it was off, otherwise it remains fully operative. In both cases the MODULE brings the pin GPIO6 high, provided its <b>&lt;direction&gt;</b> has been set to alarm output, and keeps it</p> |

| +CALA - Alarm Management | SELINT 2                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

|                                        | <p>If message is successfully written in the memory, then the result is sent in the format:</p> <p><b>+CMGW: &lt;index&gt;</b><br/>where:<br/><b>&lt;index&gt;</b> - message location index in the memory <b>&lt;memw&gt;</b>.</p> <p>If message storing fails for some reason, an error code is reported.</p> <p>Note: care must be taken to ensure that during the command execution, no other SIM interacting commands are issued.</p> <p>Note: it is possible to save a concatenation of at most 10 SMs; the maximum number of chars depends on the <b>&lt;dcs&gt;</b>: 1530 chars if 3GPP TS 23.038 default alphabet is used, 1340 chars if 8-bit is used, 670 chars if UCS2 is used. If entered text is longer than this maximum value an error is raised.</p> <p>Note: in text mode, not only SUBMIT messages can be stored in SIM, but also DELIVER messages.<br/>The type of saved message depends upon the current <b>&lt;fo&gt;</b> parameter (see <b>+CSMP</b>). For a DELIVER message, current <b>&lt;vp&gt;</b> parameter (see <b>+CSMP</b>) is used to set the message Service Centre Time Stamp <b>&lt;scts&gt;</b>, so it has to be an absolute time string, e.g. "09/01/12,11:15:00+04".<br/>SUBMIT messages can only be stored with status "STO UNSENT" or "STO SENT"; DELIVER messages can only be stored with status "REC UNREAD" or "REC READ".</p> |                 |
| <b>AT+CMGW=?</b>                       | Test command returns the <b>OK</b> result code.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                 |

| AT#ENHRST=<mod>[,<delay>] | <p>Set command enables/disables the unit reset after &lt;delay&gt; minutes.</p> <p>Parameters:<br/>&lt;mod&gt;<br/>0 – disables the unit reset (factory default)<br/>1 – enables the unit reset only for one time<br/>2 – enables the periodic unit reset<br/>&lt;delay&gt; - time interval after that the unit reboots; numeric value in minutes</p> <p>Note: the settings are saved automatically in NVM only if old or new mod is 2. Any change from 0 to 1 or from 1 to 0 is not stored in NVM</p> <p>Note: the particular case AT#ENHRST=1,0 causes the immediate module reboot. In this case if AT#ENHRST=1,0 follows an AT command that stores some parameters in NVM, it is recommended to insert a delay of at least 5 seconds before to issue AT#ENHRST=1,0, to permit the complete NVM storing.</p> |          |

### 5.1.6.5. FTP AT Commands

#### 5.1.6.5.1. FTP Time-Out - #FTPTO

| #FTPTO - FTP Time-Out |                                                                                                                                                                                                                                                                          | SELINT 2 |
|-----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| AT#FTPTO=[<tout>]     | Set command sets the time-out used when opening either the FTP control channel or the FTP traffic channel.<br><br>Parameter:<br><tout> - time-out in 100 ms units<br>100..5000 - hundreds of ms (factory default is 100)<br><br>Note: The parameter is not saved in NVM. |          |
| AT#FTPTO?             | Read command returns the current FTP operations time-out, in the format:<br><br>#FTPTO: <tout>                                                                                                                                                                           |          |
| AT#FTPTO=?            | Test command returns the range of supported values for parameter <tout>                                                                                                                                                                                                  |          |

#### 5.1.6.5.2. FTP Open - #FTPOPEN

| #FTPOPEN - FTP Open                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | SELINT 2 |
|-----------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| AT#FTPOPEN=[<server:port>,<username>,<password>[,<mode>]] | Execution command opens an FTP connection toward the FTP server.<br><br>Parameters:<br><server:port> - string type, address and port of FTP server (factory default port 21).<br><username> - string type, authentication user identification string for FTP.<br><password> - string type, authentication password for FTP.<br><mode><br>0 - active mode (factory default)<br>1 - passive mode<br><br>Note: Before opening an FTP connection either the GSM context must have been activated by AT#SGACT=0,1 or the PDP context #1 must have been activated by AT#SGACT=1,1 or by AT#GPRS=1 |          |
| AT#FTPOPEN=?                                              | Test command returns the OK result code.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |          |

#### 5.1.6.5.3. FTP Close - #FTPCLOSE

| #FTPCLOSE - FTP Close |                                             | SELINT 2 |
|-----------------------|---------------------------------------------|----------|
| AT#FTPCLOSE           | Execution command closes an FTP connection. |          |
| AT#FTPCLOSE=?         | Test command returns the OK result code.    |          |

#### 5.1.6.5.4. FTP Config - #FTPCFG

| #FTPCFG – description                                              | SELINT 2                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|--------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>AT#FTPCFG=&lt;tout&gt;,&lt;IPPignoring&gt;[,&lt;FTPSEn&gt;]</b> | <p><b>&lt;tout&gt;</b> - time-out in 100 ms units<br/>100..5000 - hundreds of ms (factory default is 100)</p> <p>Set command sets the time-out used when opening either the FTP control channel or the FTP traffic channel.</p> <p>Note: The parameter is not saved in NVM.</p> <p><b>&lt;IPPignoring&gt;</b><br/>0: No IP Private ignoring. During a FTP passive mode connection client uses the IP address received from server, even if it is a private IPV4 address.<br/>1: IP Private ignoring enabled. During a FTP passive mode connection if the server sends a private IPV4 address the client doesn't consider this and connects with server using the IP address used in AT#FTPOPEN.</p> <p><b>[,&lt;FTPSEn&gt;]</b><br/>0 – Disable FTPS security: all FTP commands will perform plain FTP connections.<br/>1 – Enable FTPS security: from now on any FTP session opened through FTP commands will be compliant to FTPS protocol, providing authentication and encrypted communication.</p> <p>Note: in FTPS mode, FTP commands response time is generally bigger than in normal FTP mode. This latency is mainly due to the SSL handshake that has to be done at the opening of the FTP session (#FTPOPEN) and whenever a data exchange is required (#FTPPUT, #FTPGET etcetera).</p> <p>Note: FTP security cannot be enabled if an SSL socket has been activated by means of #SSLD or #SSLFASTD. Moreover, trying to dial an SSL socket when <b>&lt;enable&gt;=1</b> raises an error.</p> <p>Note: any <b>&lt;enable&gt;</b> change is forbidden during an open FTP connection (with or without security). Furthermore, SSL configuration settings are forbidden during FTPS connections</p> |

```
// Here data socket will stay opened, but interface will be
//available(command mode)

AT#FTPAPPEXT=Size
>... write here the binary data. As soon Size byte are written, data are
sent and OK is returned
#FTPAPPEXT: <SentBytes>
OK

.....

// Last #FTPAPPEXT will close the data socket, because
// second(optional) parameter has this meaning:

AT#FTPAPPEXT=Size,1
>...write here the binary data. As soon Size byte are written, data are sent
and OK is returned
#FTPAPPEXT: <SentBytes>
OK

// If the user has to reopen the data port to send another
// (or append to the same) file, he can restart with the
// FTPPUT(or FTPAPP.)
//Then FTPAPPEXT,... to send the data chunks on the //reopened data
port.

// Note: if while sending the chunks the data port is closed
// from remote, user will be aware of it because #FTPAPPEXT // will
indicate ERROR and cause (available if previously //issued the command
AT+CMEE=2) will indicate that
//socket has been closed.
// Also in this case obviously, data port will have to be //reopened with
FTPPUT and so on...(same sequence)
```

## 5.1.6.6. Enhanced IP Easy Extension AT Commands

### 5.1.6.6.1. Authentication User ID - #USERID

| #USERID - Authentication User ID           |                                                                                                                                                                                                                                                                                                                                                                                                                     | SELINT 2 |
|--------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| <b>AT#USERID=</b><br><b>[&lt;user&gt;]</b> | Set command sets the user identification string to be used during the authentication step.<br><br>Parameter:<br><b>&lt;user&gt;</b> - string type, it's the authentication User Id; the max length for this value is the output of Test command, <b>AT#USERID=?</b> (factory default is the empty string "").<br><br>Note: this command is not allowed for sockets associated to a GSM context (see <b>#SCFG</b> ). |          |
| <b>AT#USERID?</b>                          | Read command reports the current user identification string, in the format:<br><br><b>#USERID: &lt;user&gt;</b>                                                                                                                                                                                                                                                                                                     |          |
| <b>AT#USERID=?</b>                         | Test command returns the maximum allowed length of the string parameter <b>&lt;user&gt;</b> .                                                                                                                                                                                                                                                                                                                       |          |

| #SKTL - Socket Listen | SELINT 2                                                                                                                                                                                                                                                                                                                                                              |
|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Note                  | The main difference between this command and <b>#SKTD</b> is that <b>#SKTL</b> does not contact any peer, nor does any interaction with the GPRS context status, leaving it <b>ON</b> or <b>OFF</b> according to the <b>#GPRS</b> setting, therefore when the connection made with <b>#SKTL</b> is closed the context (and hence the local IP address) is maintained. |

#### 5.1.6.6.17. Firewall Setup - #FRWL

| #FRWL - Firewall Setup                                                | SELINT 2                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|-----------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>AT#FRWL=[&lt;action&gt;, &lt;ip_address&gt;, &lt;net_mask&gt;]</b> | Execution command controls the internal firewall settings.<br><br>Parameters:<br><action> - command action<br>0 - remove selected chain<br>1 - add an <b>ACCEPT</b> chain<br>2 - remove all chains ( <b>DROP</b> everything); <ip_addr> and <net_mask> has no meaning in this case.<br><ip_addr> - remote address to be added into the <b>ACCEPT</b> chain; string type, it can be any valid IP address in the format: xxx.xxx.xxx.xxx<br><net_mask> - mask to be applied on the <ip_addr>; string type, it can be any valid IP address mask in the format: xxx.xxx.xxx.xxx<br><br>Command returns <b>OK</b> result code if successful.<br><br>Note: the firewall applies for incoming (listening) connections only.<br><br>Firewall general policy is <b>DROP</b> , therefore all packets that are not included into an <b>ACCEPT</b> chain rule will be silently discarded. |

| #FRWL - Firewall Setup |                                                                                                                                                                                                                                                                                                                                                                                                                    | SELINT 2 |
|------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
|                        | <p>When a packet comes from the IP address <b>incoming_IP</b>, the firewall chain rules will be scanned for matching with the following criteria:</p> <p><b>incoming_IP &amp; &lt;net_mask&gt; = &lt;ip_addr&gt; &amp; &lt;net_mask&gt;</b></p> <p>If criteria is matched, then the packet is accepted and the rule scan is finished; if criteria is not matched for any chain the packet is silently dropped.</p> |          |
| AT#FRWL?               | <p>Read command reports the list of all <b>ACCEPT</b> chain rules registered in the Firewall settings in the format:</p> <p><b>#FRWL: &lt;ip_addr&gt;,&lt;net_mask&gt;</b><br/> <b>#FRWL: &lt;ip_addr&gt;,&lt;net_mask&gt;</b><br/>         ....<br/> <b>OK</b></p>                                                                                                                                                |          |
| AT#FRWL=?              | Test command returns the allowed values for parameter <b>&lt;action&gt;</b> .                                                                                                                                                                                                                                                                                                                                      |          |
| Example                | <p><i>Let assume we want to accept connections only from our devices which are on the IP addresses ranging from 197.158.1.1 to 197.158.255.255</i></p> <p><i>We need to add the following chain to the firewall:</i><br/>         AT#FRWL=1,"197.158.1.1","255.255.0.0"<br/>         OK</p>                                                                                                                        |          |
| Note                   | <p>For outgoing connections made with <b>#SKTD</b> the remote host is dynamically inserted into the <b>ACCEPT</b> chain for all the connection duration. Therefore the <b>#FRWL</b> command shall be used only for defining the <b>#SKTL</b> behaviour, deciding which hosts are allowed to connect to the local device.</p> <p>Rules are not saved in NVM, at startup the rules list will be empty.</p>           |          |

|                                          | <p>the unsolicited indication will report just the proactive command type:</p> <p><b>#STN: &lt;cmdType&gt;</b></p> <p>Note: if the <b>call control</b> or <b>SMS control facility in the SIM</b> is activated, when the customer application makes an outgoing call, or sends an SS or USSD, or an SMS, the following <b>#STN</b> unsolicited indication could be sent, according to GSM 11.14, to indicate whether the outgoing call has been accepted, rejected or modified by the SIM, or if the SMS service centre address or destination has been changed:</p> <p><b>#STN: &lt;cmdTerminateValue&gt;,&lt;Result&gt;[,&lt;TextInfo&gt;[,&lt;Number&gt;[,&lt;MODestAddr&gt;]]]</b></p> <p>where</p> <p><b>&lt;cmdTerminateValue&gt;</b></p> <p>150 - SMS control response<br/>160 - call/SS/USSD response</p> <p><b>&lt;Result&gt;</b></p> <p>0 - Call/SMS not allowed<br/>1 - Call/SMS allowed<br/>2 - Call/SMS allowed with modification</p> <p><b>&lt;Number&gt;</b> - Called number, Service Center Address or SS String in ASCII format.<br/><b>&lt;MODestAddr&gt;</b> - MO destination address in ASCII format.<br/><b>&lt;TextInfo&gt;</b> - alpha identifier provided by the SIM in ASCII format.</p> <p>Note: an unsolicited result code</p> <p><b>#STN: 254</b></p> <p>is sent if the user has indicated the need to end the proactive SIM application session (<b>AT#STSR=&lt;cmdType&gt;,16</b> i.e. “proactive SIM application session terminated by the user” according to GSM 11.14).</p> <p>The TA does not need to respond directly, i.e. <b>AT#STSR</b> is not required. It is possible to restart the SAT session from the main menu again with the command <b>AT#STGI=37</b>.</p> <p>Note: The settings are saved on user profile and available on following reboot. SIM Toolkit activation/deactivation is only performed at power on.</p> <p>Note: if <b>#ENS=1</b> then the <b>&lt;mode&gt;</b> parameter is set to 2</p> |
| <b>AT#STIA?</b>                          | Read command can be used to get information about the SAT interface in the format:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| #STIA - SIM Toolkit Interface Activation |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | SELINT 2 |
|------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
|                                          | <p><b>#STIA:</b> &lt;state&gt;,&lt;mode&gt;,&lt;timeout&gt;,&lt;SatProfile&gt;</p> <p>where:</p> <p>&lt;state&gt; - the device is in one of the following state:</p> <p>0 - SIM has not started its application yet</p> <p>1 - SIM has started its application (SAT main menu ready)</p> <p>&lt;mode&gt; - SAT and unsolicited indications enabling status (see above)</p> <p>&lt;timeout&gt; - time-out for user responses (see above)</p> <p>&lt;SatProfile&gt; - SAT Terminal Profile according to GSM 11.14, i. e. the list of SIM Application Toolkit facilities that are supported by the ME. The profile cannot be changed by the TA.</p> <p>Note: In SAT applications usually an SMS message is sent to the network provider containing service requests, e.g. to send the latest news. The provider returns a message with the requested information.</p> <p>Before activating SAT it is recommended to set the SMS text mode with command <b>AT+CMGF=1</b> and to enable unsolicited indications for incoming SMS messages with command <b>+CNMI</b>.</p> |          |
| <b>AT#STIA=?</b>                         | Test command returns the range of available values for the parameters <mode> and <timeout>.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |          |
| Note                                     | Just one instance at a time, the one which first issued <b>AT#STIA=n</b> (with <i>n</i> different from zero), is allowed to issue SAT commands, and this is valid till the same instance issues <b>AT#STIA=0</b> .<br>After power cycle another instance can enable SAT.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |          |
| Note                                     | A typical SAT session on AT interface starts after an <b>#STN: 37</b> unsolicited code is received, if enabled(see above). At that point usually an <b>AT#STGI=37</b> command is issued (see <b>#STGI</b> ), and after the SAT main menu has been displayed on TE an <b>AT#STSR=37,0,x</b> command is issued to select an item in the menu (see <b>#STSR</b> ).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |          |

#### 5.1.6.11.2. SIM Toolkit Get Information - #STGI

| #STGI - SIM Toolkit Get Information                 | SELINT 2                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| Note                                | <p>The unsolicited notification sent to the user:</p> <p><b>#STN: 37</b></p> <p>is an indication that the main menu of the SIM Application has been sent to the TA. It will be stored by the TA so that it can be displayed later at any time by issuing an <b>AT#STGI=37</b> command.</p> <p>A typical SAT session on AT interface starts after an <b>#STN: 37</b> unsolicited code is received, if enabled. At that point usually an <b>AT#STGI=37</b> command is issued, and after the SAT main menu has been displayed on TE an <b>AT#STSR=37,0,x</b> command is issued to select an item in the menu (see below). The session usually ends with a SIM action like sending an SMS, or starting a call. After this, to restart the session from the beginning going back to SAT main menu it is usually required an <b>AT#STSR=37,16</b> command.</p> <p>The unsolicited notification sent to the user:</p> |

| #STGI - SIM Toolkit Get Information | SELINT 2                                                                                                                                                                                                    |

## 5.1.6.12. Phonebook AT Commands Set

### 5.1.6.12.1. Read Group Entries - #CPBGR

| #CPBGR- Read Group Entries                                            | SELINT 2                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|-----------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>AT#CPBGR=</b><br><b>&lt;index1&gt;</b><br><b>[,&lt;index2&gt;]</b> | <p>Execution command returns Grouping information Alpha String (GAS) USIM file entries in location number range &lt;index1&gt;...&lt;index2&gt;. If &lt;index2&gt; is omitted, only location &lt;index1&gt; is returned. These strings are the names used for groups an ADN entry could belong to.</p> <p>Parameters:<br/>           &lt;index1&gt; - integer type, value in the range of location numbers of GAS.<br/>           &lt;index2&gt; - integer type, value in the range of location numbers of GAS.</p> <p>The response format is:<br/> <b>[#CPBGR: &lt;index1&gt;,&lt;text&gt;[&lt;CR&gt;&lt;LF&gt;</b><br/> <b>#CPBGR: &lt;index2&gt;,&lt;text&gt;[...]]]</b></p> <p>where:<br/>           &lt;indexn&gt; - the location number of the GAS entry<br/>           &lt;text&gt; - the alphanumeric text associated to the entry</p> |
| <b>AT#CPBGR=?</b>                                                     | <p>Test command returns the supported range of values for parameters &lt;indexn&gt; and the maximum length of &lt;text&gt; field, in the format:</p> <p><b>#CPBGR: (&lt;minIndex&gt; - &lt;maxIndex&gt;),&lt;tlength&gt;</b></p> <p>where:<br/>           &lt;minIndex&gt; - the minimum &lt;index&gt; number, integer type<br/>           &lt;maxIndex&gt;- the maximum &lt;index&gt; number, integer type<br/>           &lt;tlength&gt; - maximum &lt;text&gt; field length, integer type</p>                                                                                                                                                                                                                                                                                                                                               |

#### 5.1.6.12.2. Write Group Entries - #CPBGW

| #CPBGW - Write Group Entry  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | SELINT 2 |
|-----------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| AT#CPBGW=<br><index>,<text> | <p>Execution command writes Grouping information Alpha String (GAS) USIM file entry in location number &lt;index&gt;.</p> <p>Parameters:<br/>           &lt;index&gt; - integer type, value in the range of location numbers of the GAS file.<br/>           &lt;text&gt; - the text associated to the entry, string type</p> <p>Note: If record number &lt;index&gt; already exists, it will be overwritten.</p>                                                      |          |
| AT#CPBGW=?                  | <p>Test command returns location range supported by the current storage as a compound value, and maximum length of &lt;text&gt; field. The format is:</p> <p><b>+CPBGW: (list of supported &lt;index&gt;s),&lt;tlength&gt;</b></p> <p>where:<br/>           &lt;tlength&gt; - integer type value indicating the maximum length of field &lt;text&gt; in bytes; actual maximum number of characters that can be stored depends upon &lt;text&gt; coding (see +CSCS)</p> |          |

### 5.1.6.13. GPS AT Commands Set

#### 5.1.6.13.1. GPS Controller Power Management - \$GPSP

| \$GPSP – GPS Controller Power Management |                                                                                                                                                                                                                                                   | SELINT 2 |
|------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| AT\$GPSP=<status>                        | <p>Set command allows to manage power-up or down of the GPS controller</p> <p>Parameter:<br/>           &lt;status&gt;<br/>           0 - GPS controller is powered down<br/>           1 - GPS controller is powered up</p>                      |          |
| AT\$GPSP?                                | <p>Read command reports the current value of the &lt;status&gt; parameter, in the format:</p> <p><b>\$GPSP: &lt;status&gt;</b></p>                                                                                                                |          |
| AT\$GPSP=?                               | <p>Test command reports the range of supported values for parameter &lt;status&gt;</p>                                                                                                                                                            |          |
| Example                                  | <p>AT\$GPSP=0</p> <p>OK</p>                                                                                                                                                                                                                       |          |
| Note                                     | <p>Power up clears GPS memory and then starts the GPS receiver. GPS data cleaning is performed on the base of the current value of the &lt;reset_type&gt; parameter (see \$GPSR)</p> <p>The current setting is stored through <b>\$GPSSAV</b></p> |          |

#### 5.1.6.13.2. GPS Reset - \$GPSR

| \$GPSR – GPS Reset        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | SELINT 2 |
|---------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| AT\$GPSR=<br><reset_type> | <p>Execution command allows to reset the GPS controller.</p> <p>Parameter:<br/> <b>&lt;reset_type&gt;</b><br/>           0 – Factory Reset: this option clears all GPS memory including clock drift.<br/>           1 - Coldstart (No Almanac, No Ephemeris): this option clears all data that is currently stored in the internal memory of the GPS receiver including position, almanac, ephemeris, and time. The stored clock drift however, is retained.<br/>           2 - Warmstart (No ephemeris): this option clears all initialization data in the GPS receiver and subsequently reloads the data that is currently displayed in the Receiver Initialization Setup screen. The almanac is retained but the ephemeris is cleared.<br/>           3 - Hotstart (with stored Almanac and Ephemeris): the GPS receiver restarts by using the values stored in the internal memory of the GPS receiver; validated ephemeris and almanac.</p> |          |
| AT\$GPSR=?                | Test command reports the range of supported values for parameter <b>&lt;reset_type&gt;</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |          |

|-------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| <b>AT#UDTSET=</b><br><b>&lt;tone&gt;</b><br><b>,&lt;F1&gt;,&lt;A1&gt;</b><br><b>[,&lt;F2&gt;,&lt;A2&gt;</b><br><b>[,&lt;F3&gt;,&lt;A3&gt;]]</b> | Set command sets frequency and amplitude composition for a User Defined Tone.<br>Parameters:<br><b>&lt;tone&gt;</b> - tone index (G,H,I,J,K,L)<br><b>&lt;Fi&gt;</b> - frequency in Hz; range is (300,3000) in step of 1 Hz<br><b>&lt;Ai&gt;</b> - amplitude in dB; range is (10,100) in step of 1 dB<br><br>Note: Ai = 100 is equal to the max value of the single tone. Lower values attenuate output to the difference between 100 and the selected amplitude (ex: Ai = 80 is equal to 100-80 = -20dB).<br><br>Note: issuing AT&F1 or AT&Z has the effect to set the parameters with the last saved in NVM values<br><br>Note: Ai = 0 and Fi = 0 are only values for uninitialized parameters and can't be issued by AT command. Every time the set command is issued, the unspecified parameters are automatically reset to zero.<br>(Ai,Fi) issuing needs also (Aj,Fj) with j<i. |          |
| <b>AT# UDTSET?</b>                                                                                                                              | Read command returns the current settings for the tones:<br><br><b>#UDTSET: G,&lt;F1&gt;,&lt;A1&gt;,&lt;F2&gt;,&lt;A2&gt;,&lt;F3&gt;,&lt;A3&gt;</b><br><b>#UDTSET: H, &lt;F1&gt;,&lt;A1&gt;,&lt;F2&gt;,&lt;A2&gt;,&lt;F3&gt;,&lt;A3&gt;</b><br><b>#UDTSET: I, &lt;F1&gt;,&lt;A1&gt;,&lt;F2&gt;,&lt;A2&gt;,&lt;F3&gt;,&lt;A3&gt;</b><br><b>#UDTSET: J, &lt;F1&gt;,&lt;A1&gt;,&lt;F2&gt;,&lt;A2&gt;,&lt;F3&gt;,&lt;A3&gt;</b><br><b>#UDTSET: K, &lt;F1&gt;,&lt;A1&gt;,&lt;F2&gt;,&lt;A2&gt;,&lt;F3&gt;,&lt;A3&gt;</b><br><b>#UDTSET: L, &lt;F1&gt;,&lt;A1&gt;,&lt;F2&gt;,&lt;A2&gt;,&lt;F3&gt;,&lt;A3&gt;</b>                                                                                                                                                                                                                                                                          |          |
| <b>AT# UDTSET =?</b>                                                                                                                            | Test command returns the supported range of values for <b>&lt;tone&gt;</b> , <b>&lt;Fi&gt;</b> and <b>&lt;Ai&gt;</b> parameters.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |          |

#### 5.1.6.14.2.6. User Defined Tone SAVE - #UDTSAV command

| #UDTSAV – User Defined Tone SAVe |                                                                                                                             | SELINT 2 |
|----------------------------------|-----------------------------------------------------------------------------------------------------------------------------|----------|
| AT#UDTSAV                        | Execution command saves the actual values of frequency and amplitude parameters that have been set with the command #UDTSET |          |
| AT#UDTSAV =?                     | Test command returns the OK result code.                                                                                    |          |
| Example                          | AT#UDTSAV<br>OK<br><br>Current tones are saved in NVM                                                                       |          |

#### 5.1.6.14.2.7. User Defined Tone Reset - #UDTRST command

| #UDTRST – User Defined Tone ReSeT |                                                                                                                                               | SELINT 2 |
|-----------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------|----------|
| AT#UDTRST                         | Execution command resets to the default set the actual values of frequency and amplitude parameters that can be set with the command #UDTSET. |          |
| AT#UDTRST =?                      | Test command returns the OK result code.                                                                                                      |          |
| Example                           | AT#UDRST<br>OK<br><br>The default value tones are restored in NVM                                                                             |          |

### 5.1.6.14.3. Audio profiles

#### 5.1.6.14.3.1. Audio Profile Factory Configuration - #PRST

| #PRST - Audio Profile Factory Configuration |                                                                                                                                                                                                                                                                                                                | SELINT 2 |
|---------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| <b>AT#PRST</b>                              | Execution command resets the actual audio parameters in the NVM of the device to the default set. It is not allowed if active audio profile is 0.<br>The audio parameters to reset are: <ul style="list-style-type: none"> <li>- Uplink path biquad filters</li> <li>- Downlink path biquad filters</li> </ul> |          |
| <b>AT#PRST=?</b>                            | Test command returns the <b>OK</b> result code.                                                                                                                                                                                                                                                                |          |
| Example                                     | AT#PRST<br>OK<br><i>Current audio profile is reset</i>                                                                                                                                                                                                                                                         |          |

#### 5.1.6.14.3.2. Audio Profile Configuration Save - #PSAV

| #PSAV - Audio Profile Configuration Save |                                                                                                                                                                                                                                                                                            | SELINT 2 |
|------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| <b>AT#PSAV</b>                           | Execution command saves the actual audio parameters in the NVM of the device. It is not allowed if active audio profile is 0.<br>The audio parameters to store are: <ul style="list-style-type: none"> <li>- Uplink path biquad filters</li> <li>- Downlink path biquad filters</li> </ul> |          |
| <b>AT#PSAV=?</b>                         | Test command returns the <b>OK</b> result code.                                                                                                                                                                                                                                            |          |
| Example                                  | AT#PSAV<br>OK<br><i>Current audio profile is saved in NVM</i>                                                                                                                                                                                                                              |          |

#### 5.1.6.14.3.3. Audio Profile Selection - #PSEL

| #PSEL - Audio Profile Selection |                                                                                                                                                                                                                                        | SELINT 2 |
|---------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| AT#PSEL=<prof>                  | Set command selects the active audio profile<br><br>Parameter:<br><prof>: current profile<br>0 - standard profile<br>1..3 - extended profile, modifiable.<br><br><i>Note: This parameter is saved in NVM issuing AT&amp;W command.</i> |          |
| AT#PSEL?                        | The read command returns the active profile in the format:<br><br>#PSEL:<prof>                                                                                                                                                         |          |
| AT#PSEL=?                       | Test command returns the supported range of values of parameter <prof>.                                                                                                                                                                |          |

#### 5.1.6.14.4.1. Uplink Path Biquad Filters - #BIQUADIN

| #BIQUADIN - Uplink Path Biquad Filters                                                                                                                                                                                                                                                                                                                                                              | SELINT 2                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
