**Subject: AT&T 3G Sunset: Product Change Notification**

Dear Valued Customer,

As you may know, AT&T has announced their 3G (UMTS/HSPA) network sunset planned for February 2022. This could cause certain 4G LTE devices to stop correctly functioning after that date. We know this situation is not specific to Telit or any chipset provider of 4G LTE technology. This can be avoided by updating the UE usage setting in the cellular module with the AT command: AT+CEMODE=2.

To prevent this, Telit is updating this setting on modules currently in production with the above command. This has been agreed with AT&T as a running change and will not need any recertification.

For better traceability of the new default setting, Telit will use a different Type Allocation Code (TAC) range for the updated variants.

New TACs will be introduced, as it usually happens, once those listed below will be used up.

For the modules in the field, it will be sufficient to send the AT+CEMODE=2 or to update the module FW. The updated FW will be available for all SW variants. All future maintenance releases will include the new setting. Impacted variants are listed below.

LE910 V2 family:

- LE910-NA1
- LE910-NA V2
- LE910B1-NA
- LE910B4-NA

LE910Cx Family:

- LE910C1-NA
- LE910C1-NF
- LE910C4-NF
