NavSync Ltd and GainSpan Partner, Combining the Power of GPS and Wi-Fi

Aurora, IL – NavSync, Ltd, a leader in GPS navigation and timing technology announces a new strategic alliance with GainSpan Corporation, an innovator in Wi-Fi semiconductor technology.

This alliance integrates GainSpan Corporation's GS1010 ultra low power SOC (System-On-a-Chip) and embedded software with NavSync's unique capability GPS receiver. The resulting new module, the NavTrac SLT can track as low as -150 dBm over an existing standard Wi-Fi network. GainSpan Corporation's embedded 802.11 transceiver allows for the NavTrac SLT to support WPA2, WPA, WEP-64, WEP128 and no encryption options. The NavTrac SLT adds cost efficiency with compatibility to existing Wi-Fi networks as well as extended battery life technology.

The NavTrac SLT is capable of tracking over both indoor and outdoor Wi-Fi networks, enhancing the usefulness of location tracking applications in a wide variety of industries such as container yards, open pit mining, campus security, elderly and child safety and fleet management. "The ability to seamlessly track assets both indoors and out is a revolutionary development in the field of asset tracking" says Dave Jahr, director of Business Development for NavSync Ltd.

GainSpan Corporation's Wi-Fi module is FCC recognized and the NavTrac SLT is FCC Certified Class 15C.

Volume Pricing: \$182.00

About NavSync

NavSync Ltd designs and manufactures GPS receiver products specializing in timing and custom navigational applications. NavSync GPS technology enables tracking and acquisition in areas normally outside standard GPS receiver environments. NavSync Assisted GPS receivers not only track, but also acquire satellites under very harsh signal conditions such as indoor applications and severe urban canyons. NavSync is a division of The Connor-Winfield Corporation, which is a privately held, US based electronics product manufacturer. For more information about NavSync Ltd, please visit www.navsync.com.

About GainSpan Corporation

GainSpan Corporation is a technology innovator and leader in Wi-Fi semiconductor and software solutions that provide years of battery life for sensors and other connected devices. GainSpan Corporation brings sensor networks to life with breakthrough technology that leverages the ubiquitous Wi-Fi infrastructure and enables Wi-Fi devices to run up to 10 years on an AA battery. GainSpan Corporation solutions enable people to save money, save energy and work smarter. For more information about GainSpan Corporation, please visit www.gainspan.com
