## **Janus announces the launch of its new *Terminus* GSM/GPRS Wireless Terminal**

**Aurora, IL** – June, 2007 – Janus Remote Communications, a designer, manufacturer and distributor of standard and custom M2M products, announces the release of its new *Terminus* integrated wireless terminal. The *Terminus* is an intelligent GSM/GPRS Control Terminal that encapsulates everything required for wireless M2M capability in one compact, cost-effective solution. M2M products and applications enable machines, devices, or vehicles to communicate via mobile wireless networks.

In conjunction with Telit GSM/GPRS modules, the *Terminus* GSM864Q can host and control your wireless applications, minimizing the need for extra components. Alternatively, it can be used as a stand alone and powerful GPRS modem with its intrinsic TCP/IP stack.

“The *Terminus* breaks through the barriers to M2M communications by minimizing investment and reducing total system costs,” states Ken Hartman, Chief Technologist for Janus. “Not only is it intelligent, but the GSM864Q is self-contained with its own SIM card reader and standard connector interfaces, reducing the need for further hardware expense.”

Adaptable and easy to use, the *Terminus* is ideal for use in M2M Telemetry and Telematic applications including fleet and asset management, vending, security and alarm monitoring, maintenance and other telemetry applications.

The ease of use of the *Terminus* allows even commercial customers to provide M2M solutions in areas of safety, security and/or personal leisure (boating, caravans, hiking, camping, and even around the home).

### **Features:**

- Nine User Configurable GPIO
- 1 ADC Input
- Audio Handset Interface (standard interface)
- RS-232 AT Command UART Interface (DB-9)
- User Selectable UART Interface (50-pin Header) or DB-9 Serial Command
- Power Supply Voltage Range 7 – 35VDC
- Internal Replacement Fuse
- Power Supply Connector
- Status LED
- Externally Accessible SIM Card Socket
- GPS Option
